

Was the Human Species Created Inside the Moon?

I wrote in 2014-2015 my 263-page compilation of “Space Travel Innovations” which is linked in padrak.com/vesperman and commutefaster.com/vesperman.html.

I have come to realize that the book kind of buries a profoundly important subject – how did the human species originate on this beautiful but awfully lonely Planet Earth?

The purposes of my writing this essay are two-fold: To extract from the “Space Travel Innovations” book text pertinent to the origin of the human species and arrange them into a separate narrowly focused whole. My second purpose is to add somewhat reasonable evidence that Earth’s Moon is an artificial sphere. While the Moon has been observed to have some bizarre anomalies the hypothesis that the Moon is hollow does not hold up to closer examination.

Every one of Earth’s millions of exquisitely engineered species of plants and animals as well as humans HAD to be designed in a gigantic ultra-sophisticated laboratory hidden from us humans. The Moon’s interior would be one logical location for such a laboratory.

Offered is a reasonably credible answer to the question – who were the species engineers?!!!

BOOK REVIEW by Serge Kahili King

We haven't done a book review for years, but this one is so remarkable that we're making an exception. The book is *The Message From Water*, by Masaru Emoto, head of an international group doing research on subtle energies.

While considering that water comprises over 90% of the material of a fertilized ovum and that even as adults we are about 70% water, Emoto wondered about the effects of water on our health and well-being on a deeper level than just hydration.

One day he received the inspiration to examine the formation of crystals from water taken from various sources. He was mainly concerned with the state of water in Japan, but soon his research had international cooperation.

Emoto started out by setting up an unusual laboratory. It was essentially a refrigerator large enough to hold many samples of water as well as a desk, a microscope equipped with a camera, and a researcher. Since the laboratory had to be kept at a temperature below freezing, each researcher could only stay in it taking pictures for about a half hour at a time.

In his book, which is written in Japanese and English, he provides a large selection of photographs of water crystals from various sources and subjected to various conditions and treatments. The results are truly astounding.

Using crystals formed from distilled water as a base comparison, Emoto starts out by showing us photos of crystals from several rivers in Japan. The first shocking discovery was that very polluted water either has no crystal structure when it is frozen or else the crystals are very distorted and partial. In contrast, photos from clear mountain streams are well-formed. Surprisingly, crystals from mystical or sacred places like Lourdes in France and Tenkawa (a river near a Shinto shrine where I once did a Hawaiian shaman ritual) are beautiful, but their centers are empty.

Later, there are before and after photos of frozen water subjected to heavy metal, classical and sad music, positive and negative printed words taped to the sides of sample bottles; and even positive and negative thoughts. The results of that are about what you would expect if you know Huna.

However, the most exciting experiment in my opinion was one in which a sample of water was taken from a polluted dam in Japan and then frozen and photographed. Next, a Buddhist priest sat by the water and spent an hour in prayer. Immediately after the prayer session another sample was taken, frozen and photographed. You can see the results on the next page.

The book is published in Japan and the ISBN number is 4-939098-00-1.

The DNA Phantom Effect - Secrets of Prayer and Healing

Moving Mountains: The DNA Phantom Effect

In the early 1990s, Moscow's Russian Academy of Sciences reported a startling relationship between DNA and the qualities of light, measured as photons. In a report "The DNA Phantom Effect" detailing these early studies, Dr. Vladimir Poponin described a series of experiments suggesting that human DNA directly affects the physical world through a new and previously unknown field connecting the two. Recognized as a leading expert in the field of quantum biology, Dr. Poponin was on loan to an American research institution when this series of experiments was carried out.

The experiments began as the patterns of light in a vacuum were measured in a controlled environment. After all of the air was removed from a specially designed chamber, the patterns and spacing of the light particles followed a random distribution, as expected. These patterns were double-checked and double-recorded, to be used as a reference for the next portion of the experiment.

The first surprise came as physical samples of DNA were placed inside the chamber. In the presence of genetic material, the spacing and patterns of the light particles shifted. Rather than the scattered pattern that the researchers had seen before, the particles of light began to fall into a new pattern resembling the crests and troughs of a smooth wave. The DNA was clearly influencing the photons, as if shaping them into the regularity of a wave pattern through an invisible force.

The next surprise came to the researchers as they removed the DNA from the chamber. Fully believing that the particles of light would return to their original state of random distribution, something very unexpected occurred. The patterns were very different those seen before the DNA was introduced. In his own words, Poponin described the light as behaving 'surprisingly and counter-intuitively.' After rechecking the instruments and rerunning the experiments, the researchers were faced with finding an explanation for what they had witnessed. In the absence of the DNA, what was affecting the particles of light? Did the DNA leave something behind, a residual force of some kind, that lingered long after the biological material had disappeared?

Poponin writes that he and the researchers were "forced to accept the working hypothesis that some new field structure is being excited. . . ." To emphasize that the effect was related to the physical DNA molecule, the new phenomenon was named the 'DNA phantom effect.' Poponin's 'new field structure' sounds surprisingly similar to the 'matrix' of Max Planck's force and the effects suggested in ancient traditions.

This series of experiments is important because it clearly demonstrates, perhaps for the first time under laboratory conditions, a relationship that offers even greater credibility to the effect of prayer in our physical world. In this instance the DNA was more or less a passive collection of molecules unattached to the brain of a conscious living being. Even in the absence of direct feeling pulsing through its double-helix antenna, there was a force and a measurable effect in its immediate world.

Researchers suggest that the average-sized person, of average height and weight, has many trillions of cells in his or her body. If each cell, each antenna of feeling and emotion within an individual, carries the same properties affecting the world around them, how much is the effect amplified? Now, rather than random feelings coursing through the cells of that one person, what happens if the feeling is a result of a specific form of thought and emotion, regulated as prayer? Multiply the effects of this one individual, empowered through a specific mode of prayer, by even a fraction of the 6 billion or so people in our world today, and we begin to get a sense of the power inherent in our collective will. It is the power to end all suffering and avert the pain that has been the hallmark of the twentieth century. The key is that we must work together to achieve such a goal. This may prove to be the greatest challenge of the third millennium.

In our own language we have the vocabulary to describe our forgotten relationship to the forces of our world, the intelligence of the cosmos, and one another. Using some of the most sensitive devices of our time to measure fields of energy that we did not even acknowledge fifty years ago, our own science has now validated the relationship of which the ancients reminded us over two thousand years ago. We have direct access to the forces of our world, and we have come full circle. This is the language to move mountains. It is the same language that allows us to choose life over cancerous tumors, and create peace in situations where we may believe that peace does not exist. When we read of healing miracles in times past, no longer are we left wishing that the same miracles could occur today. The miraculous outcomes are already here; we are simply asked to choose them.

Today I continue to pray. For me, each moment of life has become a prayer. I still give thanks for the good things and now feel empowered to choose new conditions in place of those that have caused suffering in the past. My training in the hard sciences has shown me that there are few mysteries and little we cannot validate, if we dare to accept the 'laws' that nature shows us in the miracle of each day.

Prayer has demonstrated to me that certain things *are*, regardless of our ability to prove them in the moment. For example, I know that some of the most sacred memories of our heritage have been scattered throughout the monasteries, churches, tombs, and temples of those who have come before us. I also know that the same memories live on in the customs and traditions of peoples that we may previously have judged as primitive. I know that we are capable of beautiful dreams, great possibilities, and unspoken depths of love. Perhaps most important, I know that a possibility already exists in which we have ended the suffering of all creatures by honoring the sacredness of all life. That possibility is already here and with us now. I know these things to be true, because I have seen them. The moment we allow for such possibilities on a mass scale becomes the first moment of new hope. It is that moment that we will always remember. It is the moment when we override the last day of prophecy.

(End of article)

BTW, I, Gary Vesperman, have a strange story:

I met an energy researcher just once back in the mid-1990's. We kept in contact all these years. He is especially knowledgeable about energy inventors and their energy inventions. Every few months he emails me an interesting report. He lives in Arizona.

My website www.padrak.com/vesperman has a link to my paper "Torsion Field Physics and Torsion Field Communications" which I had written a few years ago. Last winter 2013 I wrote an update "Torsion Field Physics and Torsion Field Communications II". While I was writing the TF II paper one evening, I had gotten as far as the chapter titled "The DNA Phantom Effect". I then took a break by checking my Yahoo Inbox for new emails. There in the Inbox was a report that my friend had sent titled "Chemical Evolution Theorist Forced into a U-Turn". The timing was perfect for me to add his report as the very next appropriate chapter!

Here's another example of the power of the human mind to influence matter. The International Symposium on New Energy was held in the Denver Hilton South, Denver, CO April 25 - 28, 1996. From my report on the symposium is this:

Brian O'Leary, a former Apollo astronaut, in his speech described his experiments with psychokinesis, which is the study of the human mind's influence on matter. One successful experiment involves dropping balls such as ping pong or tennis balls down an array of pins sticking horizontally out the side of a vertical panel. The statistical distribution is triangular. A person focusing on the balls to move left or right will disturb the triangular distribution pattern so as to bulge left or right corresponding to the bias of the person's mind.

(End of excerpt)

The magnitude of the 9/11 World Trade Center attack was apparently foretold a couple of months before by statistical analysis of Internet language. Mob hysteria often powerfully and contagiously affects individual behavior.

Chemical Evolution Theorist Forced into a U-Turn

ARCHAEOLOGY NEWSFLASH 340

This news is from Jonathan Gray – www.beforeus.com.

Chemical evolution theorist forced into a U-turn

"We've made an awful mistake!" Dismay was in Dean's voice. "A student has knocked our theory to bits!" Dr. Dean Kenyon, Professor of Biology (Emeritus) at San Francisco State University, was one of the leading chemical evolution theorists in the world. He co-authored "Biochemical Predestination", which claimed

1. that the evolution of life was inevitable...
2. that proteins to produce living cells were formed directly by forces of attraction between their parts...
3. that proteins are just formed together (self-assemble) in chains, directly from amino acids, without any DNA assembly instructions.

His theory was accepted with enthusiasm by the evolutionary scientific community. But within just five years after publishing, Kenyon suddenly had serious doubts. It began when one of his students asked, "How could the first proteins have been assembled without the help of genetic instructions?" (Proteins were the necessary information to build the first cell.)

And then DNA was discovered. This would prove fatal to Kenyon's molecular evolution theory. Kenyon confesses, "The more I conducted my own studies, including a period of time at NASA-AMES Research Center, the more it became apparent there were multiple difficulties with the chemical evolution account. And further experimental work showed that amino acids do not have the ability to order themselves into any biologically meaningful sequences.

"The more I thought about the alternative that was being presented in the criticism, and the enormous problem that all of us who had worked on this field had neglected to address, the problem of the origin of genetic information itself, then I really had to re-assess my whole position regarding origins." (Unlocking the Mysteries of Life)

What he now had to address was this: What was the source of the biological information in DNA? "If one could get at the origin of the messages, the encoded messages within the living machinery, then you would really be onto something far more intellectually satisfying than this chemical evolution theory." (Ibid.)

The astonishing fact is that inside every microscopic-sized cell, machines work together to accomplish specific jobs and are shepherded by other specially shaped machines to precise locations where they are needed. Learning this, Kenyon exclaimed, "This is absolutely mind-boggling, to perceive at this scale of size, such a finely tuned apparatus, a device, that bears the marks of intelligent design and manufacture!"

Observable evidence of a master designer

This is observable evidence of thoughtful, programmed designing by some Superior Mind. Evidence of intelligently organized patterns.

Music in genes

Something else. Did you know this? It was recently discovered that DNA is linked to music! If you like music, but think that you can't carry a tune, you may be wrong. Respected geneticist, Susumo Ono, believes he's discovered music in genes – particularly human genes, fish genes and rabbit genes. Susumo is a researcher in DNA.

He asked himself, "If we were to assign a musical note to each chemical on the DNA strand and string those notes together and play them, what would DNA sound like?"

So he did this – and the result was amazing. He discovered musical patterns of notes, that again reveal intelligence. Susumo Ono was so astonished that he took his findings to musicians. And musicians, in turn, were astonished to hear echoes of Bach, of Schubert, of Mozart in DNA music. Using the same formula for converting DNA into music, Dr Ono worked backwards and translated Chopin's funeral march into chemical symbols. It came out cancer!

Skeptics naturally point out that these strands of DNA produce only a string of single notes; it is the musicians who fill in the rhythm and the harmony.

But the bottom line is this: Whichever way you look at it, the PATTERNS of single notes testify to intelligence as the source of DNA. Certainly it is not from a blind, accidental force in nature.

Identical to written language

But there's more, much more. Scientists at Bell Laboratories conducted studies on the mathematical language in the DNA molecule. And what did they find? Its mathematical pattern is identical to that of conversational language.

Concerning DNA, Charles Thaxton states: "A structural identity has been discovered between the genetic message on DNA and the written messages of a human language." (Charles Thaxton, "A New Design Argument," *Cosmic Pursuit* 1, no. 2, Spring 1998)

Hupert Yockey explains: "There is an identity of structure between DNA (and protein) and written linguistic messages.

"Since we know by experience that intelligence produces written messages, and no other cause is known, the implication, according to the abductive method, is that intelligent cause produced DNA and protein.

"The significance of this result lies in the security of it, for it is much stronger than if the structures were merely similar.

"We are not dealing with anything like a superficial resemblance between DNA and a written text.

”We are not saying DNA is like a message. Rather, DNA is a message. True design thus returns to biology.”

(Hubert P. Yockey, “Journal of Theoretic Biology”)

Since there is no doubt in anyone’s mind it takes intelligence to write a language, it is evident that it took intelligence to write the DNA code.

Intelligently designed ‘sentences’ impressed from the outside

Dean Kenyon was asked if DNA comes in intelligently designed ‘sentences’.

INTERVIEWER: “And is it true that when scientists peer into the microscopic world of DNA, they find not mere random arrangements, but well-written ‘instruction books’?”

KENYON: “Yes. Masterpieces of immense intricacy and subtlety.”

INTERVIEWER: “And you argue that these biological ‘sentences’ in DNA could not have arisen merely by material means, as evolutionists suggest?”

KENYON: “No. Just as the chemistry and physics of ink and paper do not determine the order of symbols in a printed text, but that order must be impressed on the ink from the ‘outside’, so also the order of the bases, or sub-units, in DNA [adenine, thymine, guanine, and cytosine, or A, T, G, and C as commonly represented] is not determined by the known chemical tendencies of these individual sub-units, but instead appears to have been impressed from the ‘outside’ on the sub-units to create just those sequences that make biological sense.

The fantastic complexity and orderliness of the DNA code – condensed into an incredibly tiny size – suggests the work of a brilliant intellect rather than chance processes. It suggests that much thought has gone into their design – just as human beings use intelligence to design and construct computers, jumbo jets, space craft and other intricate equipment.

If radio signals were to be received from outer space, they would be understood as evidence of an intelligent source. Why then should we not regard the message sequence on the DNA molecule as prima facie evidence of an intelligent source?

Designed not to evolve

But that is not all! Gene code letters have built in error protection! Genes store information in long strings of DNA, in the form of chemical letters, called A, T, C and G. So that genes can be accurately copied, each gene consists of two parallel strands of DNA held together by links between the code letters of one strand and those of the other strand. The two strands are not identical. That is, A’s do not link to A’s, and so on. Instead, they are complimentary. A’s always link to T’s; C’s always link to G’s.

Donail MacDonaill of Trinity College, Dublin, studied that pattern of linkages between letters. And he found that they form a parity code similar to computer codes, to minimize mistakes during the electronic transfer of information. (Nature science update, www.nature.com/nsu September 18, 2002)

Now is the moment of truth. No one would be so naïve as to believe modern electronic parity codes could have evolved by chance. They were carefully planned by software designers. The parity code found in DNA is further evidence the genetic code was deliberately created. It also reminds us that DNA is designed to maintain accurate copies and avoid changes in the information it carries.

This means it was designed to NOT evolve. But rather to reproduce its own kind forever. Come to think of it, wouldn't that make evolution scientifically impossible?

Jonathan Gray info@archaeologyanswers.com

International explorer, archaeologist and author Jonathan Gray has traveled the world to gather data on ancient mysteries. He has penetrated some largely unexplored areas, including parts of the Amazon headwaters. The author has also led expeditions to the bottom of the sea and to remote mountain and desert regions of the world. He lectures internationally.

The Origin of the Human Species

Gary Vesperman

One of my projects is tracking down the origin of the human species. I reject the theory of evolution because it has too many obvious flaws. All one has to do is look at a fellow human and notice a preponderance of intelligent design such as the hairless forehead and even exquisitely precise engineering characterized by eyes and ears. When I was a kid living in Wisconsin's north woods, I particularly noticed that the red mark on red-winged black birds couldn't possibly be the result of random evolution undirected by higher intelligence.

The cheetah is the only large animal found to be genetically identical based on DNA testing of 50 specimens. The cheetah may well be a relatively recently introduced new species. The speedy cheetah combines the features of cats and dogs – the only such animal on earth.

Genetic, linguistic, and geological evidence all independently indicate that a few humans were created as spectacularly engineered holographic manifestations of the underlying reality by superior intelligence and placed on Planet Earth 200,000 years ago.

The reference I have for the finding by geneticists that humans started 200,000 years ago was in <http://www.nexusmagazine.com/articles/darwinism.2.html>. The link is no longer active. A search of nexusmagazine.com for Darwinism turns up Lloyd Pye's two-part article titled "Darwinism: A Crumbling Theory".

The reference I have for the independent conclusion by linguists that humans *also* began 200,000 years ago is in the Hammond Atlas of the World, by Hammond Incorporated 1995, ISBN 0-8437-1175-2, the chapter on Languages and Religions, page 22. The pertinent statement is "Some linguists theorize that all people – and all languages – are descended from a tiny population that lived in Africa some 200,000 years ago."

The reference I have for the independent similar conclusion by geologists is in Doug MacGougall's book "Frozen Earth; The Once and Future Story of Ice Ages" published 2004 by University of California Press, ISBN 0-520-23922-9, the chapter on Ice Ages, Climate, and Evolution, page 193. The pertinent statement is "Several species of *Homo* that we know about appeared and disappeared over the past 2.5 million years before *Homo Sapiens* finally arrived on the scene, probably between 100,000 and 200,000 years ago."

Next time you shop in a supermarket produce department, take a few minutes to appreciate the creativity that went into the genetic engineering of each of the types of fruits and vegetables. When I did that some years ago, I was dazzled and overwhelmed by the variety and originality of their beautiful designs of texture, taste, color, etc. I profoundly admire the artistic and precise genetic engineering required to make delicious and nutritious figs, watermelons, oranges, apples, bananas, potatoes, celery, cauliflower, string beans, squash, corn, peas, dates, beans, artichokes, lettuce, tomatoes, okra, walnuts, peas, anise, parsnips, basil, garlic, onions, cucumbers, bell peppers, beets, carrots, turnips, pears, strawberries, blueberries, apricots, leeks, spinach, raspberries, jicama, blackberries, cantalopes, wheat, bullberries, etc. Structural engineers particularly admire the cleverly designed strength and rigidity of the otherwise flimsily thin-shelled walnut.

My supermarket produce department shopping experience since then has never been quite the same.

I need a very attractive woman as a volunteer. Notice how she is so exquisitely designed. She can sing beautifully melodic songs. Her hair is neatly divided from a completely hairless forehead. Her eyes and ears operate with the highest engineered precision. If I squeeze and pinch her, she seems to be a solid female human, doesn't she? No, she is not. She actually is a spectacularly engineered holographic manifestation of the underlying reality. She can heal other people by simply laying her hands on them (Reiki healing). That is, her "mind has no providence for limitations". She can see submarines in the ocean. She can read other people's minds and past life history. She can predict the future. Her mind and senses are intimately connected with me, every one of you, everything else in the Universe, and even possibly with a higher being whose existence is advocated by some of the organized religions.

Finally, the holographic mind theory, as so thoroughly explained further and documented in Dr. David Yurth's unpublished book "Seeing Past The Edge", offers two fundamental lessons for her as she goes about her daily life of the utmost importance: First, careful scientific research indicates that her mind and senses really will survive death as apparently proven by numerous anecdotal reports of near-death experiences. Second, her acts of kindness and unkindness to her fellow human beings, and perhaps even her pet animals and plants, may be remembered by them for all eternity.

Gary Vesperman spent a couple of weeks March 2003 editing David G. Yurth's manuscript for his groundbreaking book "Seeing Past The Edge". Its 474 endnotes indicate his many years of extensive research in physics, consciousness, cosmology, etc. The following four paragraphs were copied (and slightly edited) from his book's Chapter 9 "The Torsion Field: Information Link to Infinity" (copied in "Space Travel Innovations"):

"More than 4,000 papers have been published by more than 150 teams of scientists over the past one hundred twenty years, describing what is the torsion field, what functions it performs, how it works, and where it is to be found.

State-of-the-art devices which have been created to operate in this field are becoming more prolific and sophisticated every day. Today, anyone can buy a 5th field generator from any of four sources in the former Soviet states. Their devices have been constructed, operated, tested, documented and patented. They propagate information into and retrieve information out of the torsion field.

The theoretical structure and functional dynamics of the physical vacuum and the role of the torsion field are becoming clearer every day. References are provided in the appendixes to more than 250 different papers, journals and books which describe many of the interesting features of the physical vacuum and the torsion field, including the research conducted by teams of scientists all over the world.

A lengthy list of attributes (see subchapter in “Space Travel Innovations” titled “Torsion Field Attributes”) has been experimentally identified which demonstrates that the torsion field operates holographically, without regard to time and distance. Its operations are characterized by a variety of behaviors which have been described conceptually, experimentally and mathematically as functions of spin polarity, angular momentum and weighted waveform vector velocities. For example, unlike electromagnetism, where analogous charges repel and opposite charges attract, in torsion fields spins polarized in the same direction attract, and spins polarized in the opposite direction repulse.”

“Space Travel Innovations” also includes Chapter 8 of “Seeing Past The Edge” – “Phenomena Which Can Not be Accommodated”.

(A public presentation of this topic can be enhanced by placing on a table two TV cameras, two TV monitors, and a square or rectangular aquarium containing just one fish.)

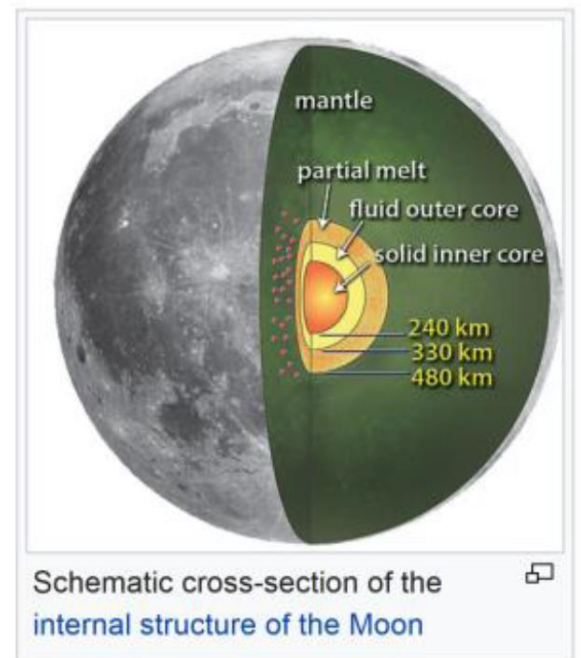

My website padrak.com/vesperman links to a Russian physics book titled “Polarization Model of the Inhomogenous Physical Vacuum”. Matter is represented in the model by equations from the electronic theory of matter and the theory of continuum mechanics. In the analysis of the model developed, the physical properties of vacuum domains are compared to anomalous phenomena, such as ball lighting, UFOs, tornadoes, poltergeists, etc. The satisfactory coincidence of the physical properties of vacuum domains and the manifestations of the phenomena in question make it possible to confirm the viability of the model. Some discussion of torsion field physics is included.

Gary Vesperman’s hypothesis is that the Moon’s interior houses an enormous laboratory for engineering Planet Earth’s millions of species of plants and animals. The evidence presented below suggests that the Moon might even be an artificial satellite. If the Moon does not support a genetic engineering laboratory, where else could such a laboratory possibly be located, other than Planet Mars and outside of our solar system? Seismological records have enabled geophysicists to map the internal structure of the moon as shown in the figure linked at <https://geology.com/nasa/moon-internal-structure/>.

Where is the entrance to the Moon’s interior? At this time, is there anyone home? How loud are the burglar alarms? (Is Gary Vesperman kidding?) Are there any high-resolution photographs of the Moon’s surface which indicate artificial construction such as rectangular grids?

Ferrying new species of plants and animals from the Moon to Planet Earth and dropping them off into suitable habitats would require spaceships to protect them from the harsh environment of space. One other possible purpose of visiting unidentified flying objects from outer space, if UFO sighting reports are true, could simply be to occasionally census millions of species and to forecast species population trends, interactions, and balances.

It fascinates Gary Vesperman to try to visualize those very first humans being created in a Moon lab and then stepping off a spaceship onto the ground in an African jungle or meadow. They had to know what was going on. Did they arrive naked with no tools and no education and were told to figure out for themselves what plants and animals are edible, how to avoid being eaten by lions, how to build a worldwide Internet, etc? Did they come with a spoken language already taught to them?

It can also easily be visualized creating animals up to a reasonable size in a Moon lab, transporting them to Earth in a spaceship, and dumping them off in suitable habitats. The blue whale is the very largest animal ever known. The largest recorded size measured 98 feet in length and weighed 130 tons. The cavernous mouth of a blue whale gulps up to 220 tons of krill-laden water at a time. Hardly a candidate for transporting a few blue whales from the Moon to Earth!

Likely what happened is that the blue whale's genes were first engineered in a Moon laboratory. A temporary pen was built in the ocean or onshore. Blue whales were built in the pen and then set loose in the ocean.

An Internet search for "moon is hollow" unsurprisingly results in a variety of opinions, particularly those of skeptics, of course. These are some of the specific arguments for an artificial moon:

From <https://www.gaia.com/article/the-hollow-moon-theory-is-the-moon-an-artificial-satellite> we have this discussion:

The Hollow Moon Theory; Is the Moon an Artificial Satellite?

The moon is often described as having divine, feminine energy – the female counterpart to our Sun. It is a source of cosmic phenomena, providing us with beautiful eclipses, changing tides, and hopefully a future staging point for missions to Mars and beyond. But when we start to look at the moon under a closer lens, a number of aberrant characteristics suggest that it might be hollow — and that there may be a secret moon base.

The Moon Rings Like a Bell

The Apollo missions and subsequent moon landings have been at the center of controversy and conspiracy for years. There has been interminable debate as to whether we actually landed on the moon, what was found there, or to what extent NASA has been hiding information from us. But amid the quarreling and speculation, the number of anomalous features on the moon has puzzled scientists and conspiracy theorists alike.

Toward the latter end of the Apollo missions, NASA astronauts placed seismic recording devices on the lunar surface to document artificial and natural moonquakes. Their equipment recorded activity ranging from meteorite strikes, to man-made explosions, and crash landings of Apollo rockets. Even the sun's heat created seismic activity when it caused the moon to thaw on a daily basis.

The astronauts were given a series of ALSEPs, or Apollo Lunar Surface Experiment Packages to set up seismographs and initiate detonations ranging from shotgun-like charges, to mortars with multiple grenades. Eventually NASA intentionally crash-landed the Apollo 12 module as well as the S-IVB rocket setting off an explosive force equivalent to nearly 12 tons of TNT.

What they found was that the moon rings like a bell, reverberating sometimes for hours at a time. Not knowing much about the moon's material composition, NASA and the Apollo astronauts were astounded by what they heard and the results that it entailed. Clearly the moon's density was significantly less than the Earth's.

The Moon is a little more than one-quarter the size of Earth, another bizarre characteristic compared to any other natural satellite in our cosmic region. Of all the moons in the solar system, ours is the 5th largest. No other planet that we're aware of has a moon that is as proportionately big as ours. All other planets with moons that size are massive gas giants. Neptune, the closest in size with a moon that big, is four times the size of Earth.

The moon is about 2,100 miles in diameter, compared to the Earth's nearly 8,000-mile diameter, yet the mass of the moon is only 1.2 percent of Earth's, while the volume of the moon is only 2 percent of Earth's.

After NASA conducted these tests, it concluded that the moon has a similar composition to our planet, although significantly less dense, with a 31-mile crust of mineral plagioclase, a mantle of olivine and pyroxene, and a very small core of Iron and Sulphur. But when the Apollo astronauts first landed on the moon, they had difficulty drilling into the surface of the craters, which are anomalies in themselves.

Craters are thought to be the result of meteorite and asteroid impacts, meaning there should be a certain proportion between their depth and width. Instead many wider craters have similar depths to significantly narrower craters, with some even appearing convex. And when astronauts attempted to drill into the craters, they were barely able to penetrate the surface, discovering processed metals like brass, mica, and pure titanium. The Moon is a Spaceship; A Secret Moon Base?

In 1970, two Soviet astronomers had been studying the satellite and theorized that it was likely a hollow moon put in place by a highly-advanced extraterrestrial race. Their theory was based on these observable anomalies, claiming the Moon was an artificial shell that had been inhabited internally for years.

While it might seem farfetched that we are being surveilled by an extraterrestrial race on the moon, or that a hollow Moon may have been intentionally placed in Earth's orbit as a secret moon base, there are a plethora of inexplicable facts about its relationship with Earth. To this day, there are several theories that attempt to explain how the Moon ended up orbiting our planet, though none have been absolutely accepted, leading many to believe that the moon is a spaceship.

Without the moon orbiting precisely where it is, it's possible that life on Earth wouldn't exist, or at least wouldn't have evolved to the point that it has. In fact, it is estimated that less than 10 percent of all terrestrial planets in the universe have an Earth to moon ratio like ours, which provides the stability that is necessary to maintain a climate that can harbor life.

The size of the moon is such that it affects our axial tilt, or the way that the Earth wobbles on its axis, changing by a single degree over the course of thousands of years. This relevation to one degree of movement is necessary for climatic stability; without the moon's balance, the Earth could tilt as much as 85 degrees every million years or so, causing drastic changes. This would adjust the orientation of the Earth to the Sun so significantly that the Sun would shift to be situated directly over the poles rather than the equator where it currently is. Life could not evolve during such radical shifts.

Is the Moon Artificial?

There are two ways that planets typically acquire moons, through accretion or capture. The process of capturing a moon is just like it sounds, a moon will drift into the orbit of a planet and become trapped in its gravitational field.

In the process of accretion, a moon is formed at the same time as the planet from the accretion disk of the solar system. But this theory has been widely dismissed due to the differences in core composition and the fact that the moon is almost a billion years older than the Earth. In fact, the mineral composition of rocks found on the surface of the moon varies drastically from those found on Earth.

The abundance of titanium is one example of such an anomaly, with certain lunar samples containing up to 10 percent of this precious mineral; the highest abundance of titanium-rich minerals on Earth has never exceeded 1 percent. There are other processed metals found on the moon like mica and brass, as well as the presence of radioactive elements like uranium-236 and neptunium, none of which are found naturally on Earth.

These moon rocks, brought back from the Apollo missions, presented another surprise; they were magnetized. Scientists were baffled, having previously assumed that the moon never had a magnetic field. The Earth's magnetism is thought to be the product of an internal dynamo, in which the rotating, convecting, and electrically conducting liquid iron in the core generates the field. However, the moon wasn't believed to have a core large enough to generate this type of dynamo mechanism.

<https://universavvy.com/is-moon-hollow> presents some arguments for and against the hollow moon hypothesis:

In one of the most striking of cosmic coincidences, the Moon is about 400 times smaller than the Sun, and is also about 400 times closer to the Earth. This fact makes both these heavenly bodies appear to be of the same size, and also results in the phenomenon of total solar eclipses taking place.

(Apparently orbital mechanics experts have not been able deduce a scenario whereby the Moon happened to be traveling near the Earth and was then captured and inserted into such a precise orbit.)

So is the Moon Hollow Inside?

Suniti Karunatilake of Cornell University explains that the normalized polar moment of inertia of the Moon is 0.393 ± 0.001 . This value is very near to that of a solid object (0.4) which has a radially constant mass-density. For reference, the normalized polar moment of inertia of the Earth is 0.33.

He also says that an extensive amount of seismic measurement data has been collected from the Moon. The scientific analysis of it has provided a near-accurate estimate of the thickness of the Moon's crust, mantle, and core, and it conclusively proves that the Moon cannot be hollow.

Further, Karen Masters of the University of Portsmouth states that, through analysis of the behavior of objects under the influence of the Moon's gravitational field, the mass of the Moon has been determined. Considering its observable size, its density has been calculated, which strongly negates any possibility of the Earth's natural satellite being hollow.

(If the Moon ever had been hollow, it would then very likely collapse into itself. So it has to be solid anyway.)

Why are its Craters Shallow and Rocks Old?

The reason why the lunar craters are shallow is similar to what the Spaceship Moon theory suggests, albeit minus the involvement of an alien hand. As is known, the composition of the Moon comprises hard elements such as iron and titanium in abundance. Their concentration could be more pronounced below the surface. As such, though small meteors might be able to drill lunar craters proportional in depth to their sizes, larger ones collide with the stronger interior layers, which impedes their progress. The geological activity, particularly lava, can explain why some craters have a flat or bulging convex bottom.

Studies on the rocks brought back from the Moon have indeed shown that they are much older than the oldest ones found on the Earth. However, scientists attribute this to the fact that while the Earth is geologically active forming newer rocks, the Moon is practically dead. As such, the surface rocks found on the Earth are younger than the ones found on the dead lunar surface.

Why Does its Composition Differ from the Earth's?

If the Moon was indeed a part of the Earth, it should have nearly the same composition too. However, the fact is that, it doesn't; specifically, it lacks the significant iron core that the Earth has. But that doesn't necessarily mean that it was created by aliens and put into its orbit. The Giant Impactor theory offers a much more possible explanation.

This theory states that, at the time of the formation of our solar system, a small planet, roughly the size of Mars, which formed elsewhere in the universe and had a very different composition to the Earth's, got into a collision course with young Earth. The great impact led to the ejection of a large amount of heated matter from the surface of both the objects. This matter began orbiting the Earth, and subsequently stuck together, forming our Moon.

(Have orbital mechanics experts been able to agree on how this glob of ejected material happened to end up as a highly spherical object in such a precisely positioned orbit around the Earth?)

Why does the Moon ring while the Earth doesn't?

The simple answer to this is because Earth has water. Water weathers the stones, expanding the different structures of the minerals in it, thus weakening it. When energy in the form of seismic vibrations due to meteor impact, thermal activity, etc., propagates through these stones, they behave as compressible structures similar to sponges. Thus, they are able to dampen the vibrations, as a result of which even the biggest Earthquake doesn't last longer than a few minutes.

The Moon, on the other hand, is a dry, solid, rigid mass. Therefore, without any dampening agent, even relatively small meteor impacts or Moon-quakes set it vibrating like a tuning fork. These vibrations tend to last for a much longer time than any on Earth. However, it doesn't have to mean that the Moon is hollow.

The Moon has giant lava tubes

In 2017, Purdue University researchers helped discover a lava tube on the Moon that could protect astronauts from hazardous conditions on the surface as reported in <https://phys.org/news/2019-07-humans-lava-tubes-moon.html>. The photo is of a giant hole on the Moon which apparently is an opening to a large lava tube. The photo is linked is at <https://www.livescience.com/60733-moon-lava-tube-could-shelter-astronauts.html>. If sophisticated analysis of minute gravity variations is correct the hole leads to a lava tube nearly as large as the city of Philadelphia. This lava tube and other giant lava tubes on the Moon could house gigantic laboratories for species engineering.

But what if no Species Engineering laboratories are ever Discovered inside the Moon?

It seems reasonable to assume that very large ultra-sophisticated laboratories are needed for engineering Earth's millions of species. But what if no species engineering laboratories are ever found inside the Moon?

Other than Planet Mars then species could be engineered elsewhere outside of our solar system.

Another possible location is a planet-sized laboratory orbiting our solar system way, way beyond Pluto.

One wild possibility is that our E.T. friends are engineering species in another dimension or parallel universe that can't be perceived or detected by us humans. When a new species is to be introduced into a suitable habitat on Earth they reach into our universe and pass the new species through some kind of an interdimensional curtain.

January 2, 2020 Gary Vesperman wrote in his Facebook "Are there any dudes out there who would have an interest in WHERE the human species was created?"

Mary-Sue Haliburton replied –

I don't know about 'dudes' necessarily, but am following several threads of interest about the evolution vs breeding of modern humans as possibly done by the mysterious 'Annunaki' also transliterated as 'Anannage' by C. O'Brien who studied Baalbek as well as whatever documentation and archaeological info could be gathered together from that and other sites.

A website preserving his legacy and several books exist thanks to a 'Golden Age Foundation' in the UK. These articles definitely link into the catastrophism data from Electric Universe including comet strikes causing devastation of the ancient culture centres. Clearly, however, these Annannage had high technology, and may have cross-bred the earlier humans with themselves.

An overview begins with "Christian O'Brien V Zecharia Sitchin" subtitled "Comparing Historical Records". Excerpt:

"Sitchin drew heavily upon Kramer's accounts of Sumerian sophistication. Only one man really sorted out cuneiform origins by starting from the beginning and ignoring academic protocols and religious prejudice. He took a common sense secular approach and this has provided us with a down to earth and accurate version of these incredible historical events with his books the Megalithic Odyssey, Genius of the Few, the Shining Ones and the Path of Light. His name was Christian O'Brien and after a career as a leading exploration geologist and retiring from being the head of the oil operating companies in Iran in 1971, he set out with his wife Barbara Joy, to recover past knowledge until his death in 2001.

"It is notable that both Sitchin and O'Brien amongst others had the vision to recognize the essential fact, that there was a brilliant advanced civilization in the past, led by the Anannage (O'Brien's correct translation). Both deserve our full attention and respect in the recovery of our incredible history, free from man-made religious constraints, and the constant abuse of adjectives such as serpent, meaning wise man or woman, and not snake or reptilian, together with Semitic and Aryan dealt with earlier."

(End of Mary-Sue's report)

Internet searches for Annunaki and Anannage find a variety of theories and archaeological reports which speculate on the origin of humans such as the Bible's Genesis chapters.

Gary Vesperman and Angela T. Smith, Ph.D., both live in Boulder City, Nevada. It is a remarkable coincidence that they occasionally see each other during lunches in the Boulder City Senior Center.

Gary has bought Angela's 304 pages book "Voices from the Cosmos". Angela and co-author C.B. Scott Jones, Ph.D., provide detailed transcripts of remote viewing/telepathic interviews with members of 18 extraterrestrial (ET) races, including the Large Grays, Nordics, Small Grays, Annunaki and others. Pages 266 – 282 provide transcripts of their dialogues with the non-Human race called the Anunnaki. On page 267 the Anunnaki specifically claim they created Humans.

Roswell Alien Explains the Origin of Species

In July 1947 a circular spacecraft of extraterrestrial origin was struck by lightning and crashed near Roswell, New Mexico. For six weeks the surviving alien pilot was repeatedly interviewed. Transcripts of those interviews include the pilot's explanation of the origin of species. A 4.26-hour audiobook of the alien's interviews is linked at

Roswell Alien Interview (1947) Full Audiobook
<https://www.youtube.com/watch?v=KI5Af8ViK0w>

At the beginning of the audiobook are shown a photograph of the crashed 'flying saucer' and Roswell newspaper reports at the time of the crash's discovery. A pdf of the text of transcripts of the alien pilot's interviews and the interviewer's comments is linked at

<https://citeseerx.ist.psu.edu/viewdoc/download?doi=10.1.1.461.7515&rep=rep1&type=pdf>.

The following excerpt of the pdf is Chapter Ten – A Lesson in Biology. (The name of the alien pilot was "Airl". Airl only allowed communication via telepathy with a young female surgical nurse, Matilda O'Donnell Macelroy, who happened to be the only woman stationed at the Roswell Army Air Field. Airl refused to communicate with the self-important government and military men who had aggressively tried to ask 'her' questions pertaining to national security.)

We should first preface with Airl's rather profound definition of "IS-BE":

"Personally, it is my conviction that all sentient beings are immortal spiritual beings. This includes human beings. For the sake of accuracy and simplicity I will use a made-up word: "IS-BE". Because the primary nature of an immortal being is that they live in a timeless state of "is", and the only reason for their existence is that they decide to "be".

No matter how lowly their station in a society, every IS-BE deserves the respect and treatment that I myself would like to receive from others. Each person on Earth continues to be an IS-BE whether they are aware of the fact or not."

Chapter Ten
A Lesson In Biology

(MATILDA O'DONNELL MACELROY PERSONAL NOTE)

"My debrief was also tape recorded as a backup and to add clarification to the stenographic notes. I debriefed immediately after my interview so that everything that was said was still fresh in my mind.

When I recounted these stories to the gallery stenographer I was still reeling a bit. The perspective on Earth history from the point of view of The Domain is very strange, to say the least. I wasn't sure if my uncomfortable feeling came from being dis-oriented, or if it came from being re-oriented. Either way, I felt unsteady and confused. Yet, at the same time, there was a ring of truth to it. I was elated and incredulous at the same time!

The stenographer looked askance at me more than a few times as she recorded the "history lesson" I passed on to her. I'm sure she thought I was losing my mind! Maybe she was right. However, if my mind had been filled with hypnotic suggestions and false memories by the "Old Empire", as Airl suggested, perhaps losing my mind would be a good idea!

I didn't have much time to ponder my own, personal thoughts about these things at the time. It was my duty to get all of the information I could from Airl and pass it on to the stenographer as soon as Airl was finished. My job was not to analyze the information, just report it as accurately as possible. The analysis would be left to the men in the gallery, or whomever else was receiving copies of the transcripts.

I also delivered a list of books and materials requested by Airl to the agent in the gallery room so these could be gathered and delivered to Airl. Each night after I left Airl, she spent the rest of the night reading or "scanning" the materials which had been delivered to her. The members of the gallery each received a transcript of the stenographic dictation to study, each looking for information that was of interest to them. In the morning after breakfast I reported back to the interview room to continue my interviews or "lessons" with Airl."

(OFFICIAL TRANSCRIPT OF INTERVIEW)

TOP SECRET

Official Transcript of the U.S. Army Air Force
Roswell Army Air Field, 509th Bomb Group
SUBJECT: ALIEN INTERVIEW, 28. 7. 1947, 1st Session

"The origins of this universe and life on Earth, as discussed in the textbooks I have read, are very inaccurate. Since you serve your government as a medical personnel, your duties require that you understand biological entities. So, I am sure that you will appreciate the value of the material I will share with you today.

The text of books I have been given on subjects related to the function of life forms contain information that is based on false memories, inaccurate observation, missing data, unproven theories, and superstition.

For example, just a few hundred years ago your physicians practiced bloodletting (Footnote) as a means to release supposed ill-humors from the body in an attempt to relieve or heal a wide variety of physical and mental afflictions. Although this has been corrected somewhat, many barbarisms are still being practiced in the name of medical science.

In addition to the application of incorrect theories concerning biological engineering, many primary errors that Earth scientists make are the result of an ignorance of the nature and relative importance of IS-BEs as the source of energy and intelligence which animate every life form. Although it is not a priority of The Domain to intervene in the affairs of Earth, The Domain Communications Office has authorized me to provide you with some information in an effort to provide a more accurate and complete understanding of these things and thereby enable you to discover more effective solutions to the unique problems you face on Earth.

The correct information about the origins of biological entities has been erased from your mind, as well as from the minds of your mentors. In order to help you regain your own memory, I will share with you some factual material concerning the origin of biological entities.

I asked Airl if she was referring to the subject of evolution. Airl said, "No, not exactly".

You will find "evolution" mentioned in the ancient Vedic Hymns. 189 (Footnote) The Vedic texts are like folk tales or common wisdoms and superstitions gathered throughout the systems of The Domain. These were compiled into verses, like a book of rhymes. For every statement of truth, the verses contain as many half-truths, reversals of truth and fanciful imaginings, blended without qualification or distinction.

The theory of evolution assumes that the motivational source of energy that animates every life form does not exist. It assumes that an inanimate object or a chemical concoction can suddenly become "alive" or animate accidentally or spontaneously. Or, perhaps an electrical discharge into a pool of chemical ooze will magically spawn a self-animated entity.

There is no evidence whatsoever that this is true, simply because it is not true. Dr. Frankenstein did not really resurrect the dead into a marauding monster, except in the imagination of the IS-BE who wrote a fictitious story one dark and stormy night. 190 (Footnote)

No Western scientist ever stopped to consider who, what, where, when or how this animation happens. Complete ignorance, denial or unawareness of the spirit as the source of life force required to animate inanimate objects or cellular tissue is the sole cause of failures in Western medicine.

In addition, evolution does not occur accidentally. It requires a great deal of technology which must be manipulated under the careful supervision of IS-BEs. Very simple examples are seen in the modification of farm animals or in the breeding of dogs. However, the notion that human biological organisms evolved naturally from earlier ape-like forms is incorrect. No physical evidence will ever be uncovered to substantiate the notion that modern humanoid bodies evolved on this planet.

The reason is simple: the idea that human bodies evolved spontaneously from the primordial ooze of chemical interactivity in the dim mists of time is nothing more than a hypnotic lie instilled by the amnesia operation to prevent your recollection of the true origins of Mankind. Factually, humanoid bodies have existed in various forms throughout the universe for trillions of years.

This was compounded by the fact that The Vedic Hymns were brought to Earth 8,200 years ago by The Domain Expeditionary Force. While they were based in the Himalaya Mountains, the verses were taught to some of the local humans who memorized them. However, I should note that this was not an authorized activity for the crew of The Domain installation, although I am sure it seemed like an innocent diversion for them at the time.

The verses were passed along verbally from one generation to the next for thousands of years in the foothills and eventually spread throughout India. No one in The Domain credits any of the material in the Vedic Hymns as factual material, any more than you would use "Grimm's Fairy Tales" 191 (Footnote) as a guide for rearing children. However, on a planet where all of the IS-BEs have had their memory erased, one can understand how these tales and fantasies could be taken seriously.

Unfortunately, the humans who learned the Vedic verses passed them along to others saying that they came from "the gods". Eventually, the content of the verses were adopted verbatim as "truth". The euphemistic and metaphorical content of the Veda were accepted and practiced as dogmatic fact. The philosophy of the verses were ignored and the verses became the genesis of nearly every religion practiced on the planet, especially Hinduism. 192 (Footnote)

As an officer, pilot and engineer of The Domain, I must always assume a very pragmatic point of view. I could not be effective or accomplish my missions if I were to use philosophical dogma or rhetoric as my operations manual. Therefore, our discussion of history is based on actual events that occurred long before any IS-BEs arrived on Earth, and long before the "Old Empire" came into power. I can relate part of this history from personal experience:

Many billions of years ago I was a member of a very large biological laboratory in a galaxy far from this one. It was called the "Arcadia Regeneration Company". 193 (Footnote) I was a biological engineer working with a large staff of technicians. It was our business to manufacture and supply new life forms to uninhabited planets. There were millions of star systems with millions of inhabitable planets in the region at that time.

There were many other biological laboratory companies at that time also. Each of them specialized in producing different kinds of life forms, depending on the "class" of the planet being populated. Over a long span of time these laboratories developed a vast catalogue of species throughout the galaxies. The majority of basic genetic material is common to all species of life. 194 (Footnote) Therefore, most of their work was concerned with manipulating alterations of the basic genetic pattern to produce variations of life forms that would be suitable inhabitants for various planetary classes.

The "Arcadia Regeneration Company" specialized in mammals for forested areas and birds for tropical regions. Our marketing staff negotiated contracts with various planetary governments and independent buyers from all over the universe. The technicians created animals that were compatible with the variations in climate, atmospheric and terrestrial density and chemical content. In addition we were paid to integrate our specimens with biological organisms engineered by other companies already living on a planet.

In order to do this our staff was in communication with other companies who created life forms. There were industry trade shows, publications and a variety of other information supplied through an association that coordinated related projects.

As you can imagine, our research required a great deal of interstellar travel to conduct planetary surveys. This is when I learned my skills as a pilot. The data gathered was accumulated in huge computer databases and evaluated by biological engineers. 195 (Footnote)

A computer is an electronic device that serves as an artificial "brain" or complex calculating machine. It is capable of storing information, making computations, solving problems and performing mechanical functions. In most of the galactic systems of the universe, very large computers are commonly used to run the routine administration, mechanical services and maintenance activities of an entire planet or planetary system.

Based on the survey data gathered, designs and artistic renderings were made for new creatures. Some designs were sold to the highest bidder. Other life forms were created to meet the customized requests of our clients.

The design and technical specifications were passed along an assembly line through a series of cellular, chemical, and mechanical engineers to solve the various problems. It was their job to integrate all of the component factors into a workable, functional and aesthetic finished product.

Prototypes of these creatures were then produced and tested in artificially created environments. Imperfections were worked out, modifications made and eventually the new life form was "endowed" or "animated" with a life force or spiritual energy before being introduced into the actual planetary environment for final testing.

After a new life form was introduced, we monitored the interaction of these biological organisms with the planetary environment and with other indigenous lifeforms. Conflicts resulting from the interaction between incompatible organisms were resolved through negotiation between ourselves and other companies. The negotiations usually resulted in compromises requiring further modification to our creatures or to theirs or both. This is part of a science or art you call "Eugenics". 196 (Footnote)

In some cases changes were made in the planetary environment, but not often, as planet building is much more complex than making changes to an individual life form. Coincidentally, a friend and engineer with whom I used to work with at the Arcadia Regeneration Company – a long time after I left the company – told me that

one of the projects they contracted to do, in more recent times, was to deliver life forms to Earth to replenish them after a war in this region of the galaxy devastated most of the life on the planets in this region of space.

This would have been about seventy million years ago. The skill required to modify the planet into an ecologically interactive environment that will support billions of diverse species was an immense undertaking. Specialized consultants from nearly every biotechnology company in the galaxy were brought in to help with the project.

What you see now on Earth is the huge variety of life forms left behind. Your scientists believe that the fallacious "theory of evolution" is an explanation for the existence of all the life forms here. The truth is that all life forms on this and any other planet in this universe were created by companies like ours.

How else can you explain the millions of completely divergent and unrelated species of life on the land and in the oceans of this planet? How else can you explain the source of spiritual animation which defines every living creature? To say it is the work of "god", is far too broad. Every IS-BE has many names and faces in many times and places. Every IS-BE is a god. When they inhabit a physical object they are the source of Life.

For example, there are millions of species 197 (Footnote) of insects. About 350,000 of these are species of beetles. 198 (Footnote) There may be as many as 100 million species of life forms on Earth at any given time. In addition, there are many times more extinct species of life on Earth than there are living life forms. Some of these will be rediscovered in the fossil or geological records of Earth.

The current "theory of evolution" of life forms on Earth does not consider the phenomena of biological diversity. Evolution by natural selection is science fiction. One species does not accidentally, or randomly evolve to become another species, as the Earth textbooks indicate, without manipulation of genetic material by an IS-BE. 199 (Footnote)

A simple example of IS-BE intervention is the selective breeding of a species 200 (Footnote) on Earth. Within the past few hundred years several hundred dog breeds and hundreds of varieties of pigeons and dozens of Koi fish have been "evolved" in just a few years, beginning with only one original breed. Without active intervention by IS-BEs, biological organisms rarely change. The development of an animal like the 'duck-billed platypus' required a lot of very clever engineering to combine the body of a beaver with the bill of a duck and make a mammal that lays eggs. Undoubtedly, some wealthy client placed a "special order" for it as a gift or curious amusement. I am sure the laboratory of some biotechnical company worked on it for years to make it a self-replicating life form!

The notion that the creation of any life form could have resulted from a coincidental chemical interaction moldering up from some primordial ooze is beyond absurdity! Factually, some organisms on Earth, such as Proteobacteria, 201 (Footnote) are modifications of a Phylum 202 (Footnote) designed primarily for "Star Type 3, Class C" planets. In other words, The Domain designation for a planet with an anaerobic atmosphere nearest a large, intensely hot blue star, 203 (Footnote) such as those in the constellation of Orion's Belt in this galaxy.

Creating life forms is very complex, highly technical work for IS-BEs who specialize in this field. Genetic anomalies are very baffling to Earth biologists who have had their memory erased. Unfortunately, the false memory implantations of the "Old Empire" prevent Earth scientists from observing obvious anomalies. The greatest technical challenge of biological organisms was the invention of self-regeneration, or sexual reproduction. It was invented as the solution to the problem of having to continually manufacture replacement creatures for those that had been destroyed and eaten by other creatures. Planetary governments did not want to keep buying replacement animals.

The idea was contrived trillions of years ago as a result of a conference held to resolve arguments between the disputing vested interests within the biotechnology industry. The infamous "Council of Yuhmi-Krum" was responsible for coordinating creature production. 204 (Footnote)

A compromise was reached, after certain members of the Council were strategically bribed or murdered, to author an agreement which resulted in the biological phenomenon which we now call the "food chain".

The idea that a creature would need to consume the body of another life form as an energy source was offered as a solution by one of the biggest companies in the biological engineering business. They specialized in creating insects and flowering plants.

The connection between the two is obvious. Nearly every flowering plant requires a symbiotic relationship with an insect in order to propagate. The reason is obvious: both the bugs and the flowers were created by the same company. Unfortunately, this same company also had a division which created parasites and bacteria.

The name of the company roughly translated into English would be "Bugs & Blossoms". They wanted to justify the fact that the only valid purpose of the parasitic creatures they manufactured was to aid the decomposition of organic material. There was a very limited market for such creatures at that time.

In order to expand their business they hired a big public relations firm and a powerful group of political lobbyists to glorify the idea that life forms should feed from other life forms. They invented a "scientific theory" to use as a promotion gimmick. The theory was that all creatures needed to have "food" as a source of energy. Before that, none of the life forms being manufactured required any external energy. Animals did not eat other animals for food, but consumed sunlight, minerals or vegetable matter only.

Of course, "Bugs & Blossoms" went into the business of designing and manufacturing carnivores. Before long, so many animals were being eaten as food that the problem of replenishing them became very difficult. As a 'solution', "Bugs & Blossoms" proposed, with the help of some strategically placed bribes in high places, that other companies begin using 'sexual reproduction' as the basis for replenishing life-forms. "Bugs & Blossoms" was the first company to develop blueprints for sexual reproduction, of course.

As expected, the patent licenses for the biological engineering process 205 (Footnote) required to implant stimulus-response mating, cellular division and pre-programmed growth patterns for self-regenerating animals were owned by "Bugs & Blossoms" too.

Through the next few million years laws were passed that required that these programs be purchased by the other biological technology companies. These were required to be imprinted into the cellular design of all existing life-forms. It became a very expensive undertaking for other biotechnology companies to make such an awkward, and impractical idea work.

This led to the corruption and downfall of the entire industry. Ultimately, the 'food and sex' idea completely ruined the bio-technology industry, including "Bugs & Blossoms". The entire industry faded away as the market for manufactured life forms disappeared. Consequently, when a species became extinct, there is no way to replace them because the technology of creating new life forms has been lost. Obviously, none of this technology was ever known on Earth, and probably never will be.

There are still computer files on some planets far from here which record the procedures for biological engineering. Possibly the laboratories and computers still exist somewhere. However, there is no one around doing anything with them. Therefore, you can understand why it is so important for The Domain to protect the dwindling number of creatures left on Earth.

The core concept behind 'sexual reproduction' technology was the invention of a chemical/electronic interaction called "cyclical stimulus-response generators". 206 (Footnote) This is a programmed genetic mechanism which causes a seemingly spontaneous, recurring impulse to reproduce. The same technique was later adapted and applied to biological flesh bodies, including Homo Sapiens.

Another important mechanism used in the reproductive process, especially with Homo Sapiens type bodies, is the implantation of a "chemical-electrical trigger" mechanism 207 (Footnote) in the body. The "trigger" which attracts IS-BEs to inhabit a human body, or any kind of "flesh body", is the use of an artificially imprinted electronic wave which uses "aesthetic pain" to attract the IS-BE.

Every trap in the universe, including those used to capture IS-BEs who remain free, is "baited" with an aesthetic electronic wave. The sensations caused by the aesthetic wavelength are more attractive to an IS-BE than any other sensation. When the electronic waves of pain and beauty are combined together, this causes the IS-BE to get "stuck" in the body.

The "reproductive trigger" used for lesser life forms, such as cattle and other mammals, is triggered by chemicals emitted from the scent glands, combined with reproductive chemical-electrical impulses stimulated by testosterone, or estrogen. 208 (Footnote)

These are also interactive with nutrition levels which cause the life form to reproduce more when deprived of food sources. Starvation promoted reproductive activity as a means of perpetuating survival through future regenerations, when the current organism fails to survive. These fundamental principles have been applied throughout all species of life.

The debilitating impact and addiction to the "sexual aesthetic-pain" electronic wave 209 (Footnote) is the reason that the ruling class of The Domain do not inhabit flesh bodies. This is also why officers of The Domain Forces only use doll bodies. This wave has proven to be the most effective trapping device ever created in the history of the universe, as far as I know.

The civilizations of The Domain and the "Old Empire" both depend on this device to "recruit" and maintain a work force of IS-BEs who inhabit flesh bodies on planets and installations. These IS-BEs are the "working class" beings who do all of the slavish, manual, undesirable work on planets.

As I mentioned, there is a very highly regimented and fixed hierarchy or "class system" for all IS-BEs throughout the "Old Empire", and The Domain, as follows:

The highest class are "free" IS-BEs. That is, they are not restricted to the use of any type of body and may come and go at will, provided that they do not destroy or interfere with the social, economic or political structure.

Below this class are many strata of "limited" IS-BEs who may or may not use a body from time to time. Limitations are imposed on each IS-BE regarding range of power, ability and mobility they can exercise.

Below these are the "doll body" classes, to which I belong. Nearly all space officers and crew members of space craft are required to travel through intergalactic space. Therefore, they are each equipped with a body manufactured from light weight, durable materials. Various body types have been designed to facilitate specialized functions. Some bodies have accessories, such as interchangeable tools or apparatus for activities such as maintenance, mining, chemical management, navigation, and so forth. There are many gradations of this body type which also serve as an "insignia" of rank.

Below these are the soldier class. The soldiers are equipped with a myriad of weapons, and specialized armaments designed to detect, combat and overwhelm any imaginable foe. Some soldiers are issued mechanical bodies. Most soldiers are merely remote controlled robots with no class designation.

The lower classes are limited to "flesh bodies". Of course, it is not possible for these to travel through space for obvious reasons. Fundamentally, flesh bodies are far too fragile to endure the stresses of gravity, temperature extremes, radiation exposure, atmospheric chemicals and the vacuum of space. There are also the obvious logistical inconveniences of food, defecation, sleep, atmospheric elements, and air pressure required by flesh bodies, that doll bodies do not require.

Most flesh bodies will suffocate in only a few minutes without a specific combination of atmospheric chemicals.

After 2 or 3 days the bacteria which live internally and externally on the body cause severe odors to be emitted. Odors of any kind are not acceptable in a space vessel.

Flesh can tolerate only a very limited spectrum of temperatures, whereas in space the contrast of temperatures may vary hundreds of degrees within seconds. Of course flesh bodies are utterly useless for military duty. A single shot from a hand-held, electronic blast gun instantly turns a flesh body into a noxious vapor cloud.

IS-BEs who inhabit flesh bodies have lost much of their native ability and power. Although it is theoretically possible to regain or rehabilitate these abilities, no practical means has been discovered or authorized by The Domain.

Even though space craft of The Domain travel trillions of "light years" in a single day, 210 (Footnote) the time required to traverse the space between galaxies is significant, not to mention the length of time to complete just one set of mission orders, which may require thousands of years. Biological flesh bodies live for only a very short time – only 60 to 150 years, at most – whereas doll bodies can be re-used and repaired almost indefinitely. The first development of biological bodies began in this universe about seventy-four trillion years ago. It rapidly became a fad for IS-BEs to create and inhabit various types of bodies for an assortment of nefarious reasons: especially for amusement, this is to experience various physical sensations vicariously through the body.

Since that time there has been a continuing "de-evolution" in the relationship of IS-BEs to bodies. As IS-BEs continued to play around with these bodies, certain tricks were introduced to cause IS-BEs to get trapped inside a body so they were unable to leave again.

This was done primarily by making bodies that appeared sturdy, but were actually very fragile. An IS-BE, using their natural power to create energy, accidentally injured a body when contacting it. The IS-BE was remorseful about having injured this fragile body. The next time they encountered a body they began to be "careful" with them. In so doing, the IS-BE would withdraw or minimize their own power so as not to injure the body. A very long and treacherous history of this kind of trickery, combined with similar misadventures eventually resulted in a large number of IS-BEs becoming permanently trapped in bodies.

Of course this became a profitable enterprise for some IS-BEs who took advantage of this situation to make slaves of others. The resulting enslavement progressed over trillions of years, and continues today. Ultimately the dwindling ability of IS-BEs to maintain a personal state of operational freedom and ability to create energy resulted in the vast and carefully guarded hierarchy or class system. Using bodies as a symbol of each class is used throughout the "Old Empire", as well as The Domain.

The vast majority of IS-BEs throughout the galaxies of this universe inhabit some form of flesh body. The structure, appearance, operation and habitat of these bodies vary according to the gravity, atmosphere, and climatic conditions of the planet they inhabit. Body types are predetermined largely by the type and size of the star around which the planet revolves, the distance from the star, the geological, as well as the atmospheric components of the planet.

On the average, these stars and planets fall into gradients of classification which are fairly standard throughout the universe. For example, Earth is identified, roughly, as a "Sun Type 12, Class 7 planet". That is a heavy gravity, nitrogen/oxygen atmosphere planet, 211 (Footnote) with biological life-forms, in proximity to a single, yellow, medium-size, low-radiation sun or "Type 12 star". The proper designations are difficult to translate accurately due to the extreme limitations of astronomical nomenclature in the English language.

There are as many varieties of life forms as there are grains of sands on the beach. You can imagine how many different creatures and types of bodies have been manufactured by the millions of companies such as "Bugs & Blossoms" for all of the myriad planetary systems during the course of seventy-four trillion years!"

(MATILDA O'DONNELL MACELROY PERSONAL NOTE)

"When Airl finished telling me this "story", there was a long, silent pause while I muddled through all this in my mind. Had Airl been reading science fiction books and fantasy stories during the night? Why would she tell me something so incredibly far-fetched? If there had not been a 40-inch tall alien, with gray "skin", and three fingers on each hand and foot sitting directly across from me, I would not have believed a single word of it! In retrospect, over the 60 years since Airl gave me this information, Earth doctors have begun to develop some of the biological engineering technology that Airl told me about right here on Earth. Heart bypasses, cloning, test tube babies, organ transplants, plastic surgery, genes, chromosomes, and so forth. One thing is very sure: I have never looked at a bug or flower the same way since then, not to mention my religious belief in Genesis."

Airl may have answered some mysteries that I, Gary Vesperman, have wondered about for a long time.

My book "Space Travel Innovations" is linked in padrak.com/vesperman and commutefaster.com/vesperman.html. Pages 134-137 have this about Reiki healing:

"Reiki. I almost cured someone terminally ill with cancer doing this a couple of years ago. I had a feeling I should go back and try again with another session, but didn't because I didn't know him (he was a friend of a friend), and a few days later he died from a pulmonary blood clot. But he did make an immediate and impressive short-term recovery.

All I do is rub my hands together for a few seconds, close my eyes, mentally say to myself "The mind has no providence for limitations", open my eyes, and then lay my hands on the patient's problem area. If I can feel heat flowing through my hands, I know it is working. When the heat stops, I either quit or move to another area on the patient's body. I have cured elbow pain, headaches, and even my brother's shortness of breath for a short while.

Since 1989 when I learned Reiki, I have struggled to understand the underlying mechanism. I have repeatedly seen it work, but it is obvious Reiki's effects are hardly explainable by conventional science. Recently I finally picked up a clue from a French acupuncturist's report in www.keelynet.com/keely/belizal.text. The ancient Egyptians were able to correlate different wave forms with different geometric shapes. There is an implication that objects can store and transfer between them, when touching, subtle forms of information. So possibly when an ill or injured person is touched by healthy people with positive minds, information is somehow transferred to be used for correcting damaged tissue.

Monarch butterflies are unique in that migratory information is passed from generation to generation. They are somehow able to fly north for the summer from their winter homes in Mexico and certain Central California coastal areas such as Monterey and Santa Cruz and then able to fly back to their winter homes, passing along precise migratory information from generation to generation. It has been suggested that these butterflies' migratory information is somehow embedded in their genetic code.

Another possibility is that their migratory information is accurately retained by their physical bodies in more subtle form, possibly in the halo that appears in Kirlian photography, as the Monarch butterflies reproduce again and again for thousands of generations with absolutely no loss of migratory information.

If true, an even more startling speculation arises: Many of the ancient peoples have acquired beliefs (colored by various religious symbols and rituals) that people don't just die and that's the end of them. Instead, the information and memories accumulated within each person as a result of genetic heritage and his or her living a life are retained in a very subtle form not normally perceivable by people still living. Their information/sensory packages are sometimes called 'spirits', 'ghosts', or 'souls'.

If the progression from Reiki healing and the association between waveforms and the shapes of objects to Monarch butterflies to a conscious being surviving the dying process is accepted, then perhaps we have physical evidence, however flimsy, of the existence of the soul."

(End of excerpt)

At long last, thanks to Trevor Osborne's forwarding of the aforementioned article on the holographic Universe (all the way from Perth, Australia via the wonderful Internet), it is now clear to me that every phenomenon I had touched on, including Reiki healing, the migration of the Monarch butterflies, and INCLUDING THE SURVIVAL OF OUR MINDS AFTER DEATH AS MANIFESTED BY NUMEROUS REPORTS OF NEAR DEATH EXPERIENCES, seems to be explainable by the theory of the holographic Universe and the holographic mind.

I happen to be an almost consistently successful Reiki healer. I have healed headaches, people's colds, the aforementioned cancer case was a spectacular example, etc. I don't go out of my way to heal people and never charge for my 'services'. A few years ago, I was sitting in a bar in Salt Lake City with a friend who appeared to be uncomfortable. An inquiry revealed that he had back surgery some years ago. After a half-hour of my Reiki healing with my hands on his back, he was amazed to find himself feeling much less pain.

Some years ago I met a lady friend of a friend who had walked into a bar on crutches. I can't remember what was the matter with her knee. After an hour of holding her bad knee between my hands doing my Reiki mumbo-jumbo while we sat on bar stools and socialized, she walked out carrying her crutches! Even I was impressed.

February 2003 I met a man who had suffered chronic back pain for 20 years. After about 15 minutes or so of laying my hands on his lower back, he was delighted that his back pain was gone.

During a Mormon church conference September 21, 2003 I happened to sit next to a man, Robert ?, who had possibly fractured a finger playing football. For about an hour I held his injured finger between my hands (after of course mentally saying to myself "The mind has no providence for limitations."). He thanked me at the end of the conference for making his finger feel so much better. Interestingly, my hands felt quite hot at the beginning indicating a powerful flow of healing energy from my body to his finger. After about ten minutes, my hands noticeably didn't feel so hot.

The holographic mind theory's projection of reality on other objects and people perhaps helps me to understand more clearly what is happening when I seem to heal people with the absurdly simple Reiki technique. I remember from reading a book on Reiki more than ten years ago that Jesus Christ also used some form of Reiki healing with exceptional success.

The holographic Universe theory seems to explain the extraordinarily high velocity of torsion field communications of many times faster than one billion times the speed of light. Instead of a generator transmitting a torsion field signal to a receiver as in the case of radio and television which operate with electromagnetic fields moving at the speed of light, the correct analogy is that of two televised images at different angles of the same fish in an aquarium.

Winter 2003 I edited David Yurth's manuscript "Seeing Past The Edge" which examines in detail many of the consequences of the holographic Universe theory. He also happens to be one of the developers of torsion field communications. Its 474 endnotes indicate his many years of extensive research.

The title of Chapter 9 is "The Torsion Field: Information Link to Infinity" (reproduced below). This chapter's findings seem to explain exactly how the Holy Ghost's influence is felt everywhere. The Universe and all its phenomena arise from a universal causal field which is referred to as consciousness. There can't be any question that consciousness is inseparable from the most fundamental aspects of the world we live in.

Plants have become regularly used as truth detectors in the Japanese criminal court system. Relations between nonliving liquid crystals and human consciousness have been documented. The attributes of consciousness become intrinsic to and inseparable from any model we can construct to describe how the world operates. Numerous carefully documented, often publicly repeated experimental results, demonstrate that nothing in this physical world operates without being effected at a fundamental level by consciousness.

Information contained in any single location in the Universe can be instantaneously obtained via the torsion field at any other remote location, regardless of the extent to which events are separated by time, space or distance. The Universe is an open, complex, quantum system, operating at all scales according to the dynamic forces that we have observed in both the microcosm and macrocosm. All phenomena in the Universe are viewed as manifestations of information.

One of my projects is tracking down the origin of the human species. I reject the theory of evolution because it has too many obvious flaws. All one has to do is look at a fellow human and notice a preponderance of intelligent design such as the hairless forehead and even exquisitely precise engineering characterized by eyes and ears. When I was a kid living in Wisconsin's north woods, I particularly noticed that the red mark on red-winged black birds couldn't possibly be the result of random evolution undirected by higher intelligence.

The cheetah is the only large animal found to be genetically identical based on DNA testing of 50 specimens. The cheetah may well be a relatively recently introduced new species. The speedy cheetah combines the features of cats and dogs – the only such animal on earth.

Genetic, linguistic, and geological evidence all independently indicate that a few humans were created as spectacularly engineered holographic manifestations of the underlying reality by superior intelligence and placed on Planet Earth 200,000 years ago.

The reference I have for the finding by geneticists that humans started 200,000 years ago is in <http://www.nexusmagazine.com/articles/darwinism.2.html>.

The reference I have for the independent conclusion by linguists that humans also began 200,000 years ago is in the Hammond Atlas of the World, by Hammond Incorporated 1995, ISBN 0-8437-1175-2, the chapter on Languages and Religions, page 22. The pertinent statement is "Some linguists theorize that all people – and all languages – are descended from a tiny population that lived in Africa some 200,000 years ago."

The reference I have for the independent similar conclusion by geologists is in Doug MacGougall's book "Frozen Earth; The Once and Future Story of Ice Ages" published 2004 by University of California Press, ISBN 0-520-23922-9, the chapter on Ice Ages, Climate, and Evolution, page 193. The pertinent statement is "Several species of Homo that we know about appeared and disappeared over the past 2.5 million years before Homo Sapiens finally arrived on the scene, probably between 100,000 and 200,000 years ago."

Next time you shop in a supermarket produce department, take a few minutes to appreciate the creativity that went into the genetic engineering of each of the types of fruits and vegetables. When I did that a couple of years ago, I was dazzled and overwhelmed by the variety and originality of their beautiful designs of texture, taste, color, etc. I profoundly admire the artistic and precise genetic engineering required to make delicious and nutritious figs, watermelons, oranges, apples, bananas, potatoes, celery, cauliflower, string beans, squash, corn, peas, dates, beans, artichokes, lettuce, tomatoes, okra, walnuts, peas, anise, parsnips, basil, garlic, onions, cucumbers, bell peppers, beets, carrots, turnips, pears, strawberries, blueberries, apricots, leeks, spinach, raspberries, jicama, blackberries, cantalopes, wheat, bullberries, etc. Structural engineers particularly admire the cleverly designed strength and rigidity of the otherwise flimsily thin-shelled walnut. My supermarket produce department shopping experience since then has never been quite the same.

(End of excerpt)

Airl, while she doesn't specifically mention Reiki healing, does seem to shed some light on how Reiki healing energy is transferred from the healer to the patient. Apparently the 'IS-Be' residing in a healer during the Reiki healing process briefly connects with the 'IS-BE' residing in the patient to transfer healing energy from the healer to the patient.

I mentioned that the cheetah species may have been introduced much more recently than most species. It may be that galactic bioengineering companies are still observing Earth's distribution of species and occasionally introducing new species.

Devout practitioners of the Christian religions often begin meals by giving thanks to God. (BTW, Airl elsewhere during the interviews offered some interesting observations about gods and religions.) Airl's explanation of how galactic bioengineering companies went to a lot of trouble separately creating each one of Earth's millions of species implies that maybe these companies should instead separately be thanked for each vegetable, fruit, grain, meat, fish, spice, etc consumed during meals.

Airl in the above definition of "IS-BE" spoke of her "...conviction that all sentient beings are immortal spiritual beings. This includes human beings. For the sake of accuracy and simplicity I will use a made-up word: "IS-BE". Because the primary nature of an immortal being is that they live in a timeless state of "is", and the only reason for their existence is that they decide to "be"."

The following German article seems to offer more evidence that a possibly immortal spiritual being resides in each of us humans. The article had been attached to an email received by Gary Vesperman in 2013.

Russian DNA Discoveries Explain Human 'Paranormal' Events

[All information is from the book "Vernetzte Intelligenz" von Grazyna Fosar und Franz Bludorf, ISBN 3930243237. The book is unfortunately only available in German so far. You can reach the authors here: Kontext - Forum for Border Science <http://www.fosar-bludorf.com>]

Edited and Translated from German Text

Esoteric and spiritual teachers have known for ages that our body is programmable by language, words and thought. This has now been scientifically proven and explained.

The human DNA is a biological Internet and superior in many aspects to the artificial one. The latest Russian scientific research directly or indirectly explains phenomena such as clairvoyance, intuition, spontaneous and remote acts of healing, self-healing, affirmation techniques, unusual light/auras around people (namely spiritual masters), mind's influence on weather patterns and much more.

In addition, there is evidence for a whole new type of medicine in which DNA can be influenced and reprogrammed by words and frequencies WITHOUT cutting out and replacing single genes. Only 10% of our DNA is being used for building proteins. It is this subset of DNA that is of interest to western researchers and is being examined and categorized. The other 90% are considered "junk DNA."

The Russian researchers, however, convinced that nature was not dumb, joined linguists and geneticists in a venture to explore that 90% of "junk DNA." Their results, findings and conclusions are simply revolutionary!

According to their findings, our DNA is not only responsible for the construction of our body, but also serves as data storage and communication. The Russian linguists found that the genetic code – especially in the apparent 'useless' 90% – follows the same rules as all our human languages.

To this end they compared the rules of syntax (the way in which words are put together to form phrases and sentences), semantics (the study of meaning in language forms) and the basic rules of grammar. They found that the alkalines of our DNA follow a regular grammar (language) and do have set rules just like our languages. Therefore, human languages did not appear coincidentally but are a reflection of our inherent DNA. The Russian biophysicist and molecular biologist Pjotr Garjajev and his colleagues also explored the vibrational behavior of DNA. In brief the bottom line was: "Living chromosomes function just like a holographic computer using endogenous DNA laser radiation." This means that they managed, for example, to modulate certain frequency patterns (sound) onto a laser-like ray, which influenced DNA frequency and thus the genetic information itself.

Since the basic structure of DNA-alkaline pairs and of language (as explained earlier) is of the same structure, no DNA decoding is necessary. One can simply use words and sentences of the human language! This, too, was experimentally proven!

Living DNA substance (in living tissue, not in vitro) will always react to language-modulated laser rays and even to radio waves, if the proper frequencies (sound) are being used. This finally and scientifically explains why affirmations, hypnosis and the like can have such strong effects on humans and their bodies. It is entirely normal and natural for our DNA to react to language.

While western researchers cut single genes from DNA strands and insert them elsewhere, the Russians enthusiastically created devices that influence cellular metabolism through modulated radio and light frequencies, thus repairing genetic defects. They even captured information patterns of a particular DNA and transmitted it onto another, thus reprogramming cells to another genome. So they successfully transformed, for

example, frog embryos to salamander embryos simply by transmitting the DNA information patterns! This way the entire information was transmitted without any of the side effects or disharmonies encountered when cutting out and re-introducing single genes from the DNA.

This represents an unbelievable, world-transforming revolution and sensation: By simply applying vibration (sound frequencies) and language instead of the archaic cutting-out procedure!

This experiment points to the immense power of wave genetics, which obviously has a greater influence on the formation of organisms than the biochemical processes of alkaline sequences.

Esoteric and spiritual teachers have known for ages that our body is programmable by language, words and thought. This has now been scientifically proven and explained.

Of course the frequency has to be correct. And this is why not everybody is equally successful or can do it with always the same strength. The individual person must work on the inner processes and development in order to establish a conscious communication with the DNA.

The Russian researchers work on a method that is not dependent on these factors but will ALWAYS work, provided one uses the correct frequency. But the higher developed an individual's consciousness is, the less need is there for any type of device: one can achieve these results by oneself. Science will finally stop laughing at such ideas and will confirm and explain the results. And it doesn't end there.

The Russian scientists also found out that our DNA can cause disturbing patterns in a vacuum, thus producing magnetized, inter-dimensional wormholes! Wormholes are by definition the microscopic equivalents of the so-called Einstein-Rosen bridges in the vicinity of black holes (left by burned-out stars).

These 'wormholes' are tunnel connections between entirely different areas in the universe through which information can be transmitted outside of space and time. The DNA attracts these bits of information and passes them on to our consciousness. This process of hyper-communication (aka telepathy) is most effective in a heightened state of relaxation, produced by meditation and/or sessions of intense prayer. The scientists were stunned to find that portions of in vitro samples of human DNA, housed nearly a mile away from the individual entering a deeply meditation state, actually disappeared into a 'wormhole' only to re-appear minutes after meditation and prayer ended.

Stress, worry or a hyperactive intellect prevent successful hyper-communication or the information will be totally distorted and useless. In nature, hyper-communication has been successfully applied for millions of years. The organized flow of life in insects proves this dramatically. Modern man knows it only on a much more subtle level as 'intuition'. But we, too, can regain full use of it.

As an example from nature, when a queen ant is separated from her colony, the remaining worker ants will continue building fervently according to plan. However, if the queen is killed, all work in the colony stops. No ant will know what to do. Apparently, the queen transmits the 'building plans' even if far away – via the group consciousness with her subjects. She can be as far away as she wants, as long as she is alive.

In humans, hyper-communication is most often encountered when one suddenly gains access to information that is outside one's knowledge base. Such hyper-communication is then experienced as inspiration or intuition (also in trance channeling). The Italian composer Giuseppe Tartini, for instance, dreamt one night that a devil sat at his bedside playing the violin. The next morning Tartini was able to note down the piece exactly from memory. He called it the Devil's Trill Sonata.

For years, a 42-year old male nurse dreamt of a situation in which he was hooked up to a kind of knowledge CD-ROM. Verifiable knowledge from all imaginable fields was then transmitted to him that he was able to recall in the morning. There was such a flood of information that it seemed a whole encyclopedia was transmitted at night. The majorities of facts were outside his personal knowledge base and reached technical details of which he knew absolutely nothing. When hyper-communication occurs, one can observe in the DNA, as well as in the human, supernatural phenomena.

The Russian scientists irradiated DNA samples with laser light. On screen, a typical wave pattern was formed. When they removed the DNA sample, the wave pattern did not disappear, it remained. Many controlled experiments showed that the pattern continued to come from the removed sample, whose energy field apparently remained by itself. This effect is now called phantom DNA effect. It is surmised that energy from outside of space and time still flows through the activated wormholes after the DNA was removed. The side effects encountered most often in hyper-communication in humans are inexplicable electromagnetic fields in the vicinity of the persons concerned.

Electronic devices like CD players and the like can be irritated and cease to function for hours. When the electromagnetic field slowly dissipates, the devices function normally again. Many healers and psychics know this effect from their work; the better the atmosphere and energy, the more frustrating it can be for recording devices as they stop functioning at that exact moment. Often by next morning all is back to normal.

Perhaps this is reassuring to read for many, as it has nothing to do with them being technically inept; it means they are good at hyper-communication.

In their book *Vernetzte Intelligenz*, Grazyna Gosar and Franz Bludorf explain these connections precisely and clearly. The authors also quote sources presuming that in earlier times humanity had been just like the animals: very strongly connected to group consciousness and thereby acted as a group. In order to develop and experience individuality, however, we humans had to forget hyper-communication almost completely.

Now that we are fairly stable in our individual consciousness, we can create a new form of group consciousness – namely one in which we attain access to all information via our DNA without being forced or remotely controlled about what to do with that information. We now know that just as we use the internet, our DNA can feed proper data into the network, can retrieve data from the network, and can establish contact with other participants in the network. Remote healing, telepathy or ‘remote sensing’ about the state of another can thus be explained. Some animals know from afar when their owners plan to return home. This can be freshly interpreted and explained via the concepts of group consciousness and hyper-communication.

Any collective consciousness cannot be sensibly used over any period of time without a distinctive individuality; otherwise we would revert to a primitive herd instinct that is easily manipulated. Hyper-communication in the new millennium means something quite different.

Researchers think that if humans with full individuality would regain group consciousness, they would have a god-like power to create, alter and shape things on Earth! AND humanity is collectively moving toward such a group consciousness of the new kind.

Fifty percent of children will become a problem as soon as they go to school, since the system lumps everyone together and demands adjustment. But the individuality of today's children is so strong that they refuse this adjustment and resist giving up their idiosyncrasies in the most diverse ways.

At the same time more and more clairvoyant children are born. Something in those children is striving more towards the group consciousness of the new kind, and it can no longer be suppressed.

As a rule, weather for example is rather difficult to influence by a single individual. But it may be influenced by group consciousness (nothing new about this to some indigenous tribes). Weather is strongly influenced by Earth resonance frequencies (Schumann frequencies). But those same frequencies are also produced in our brains, and when many people synchronize their thinking or when individuals (spiritual masters, for instance) focus their thoughts in a laser-like fashion, then it is not at all surprising that they can influence the weather.

A modern day civilization which develops group consciousness would have neither environmental problems nor scarcity of energy: for if it were to use such mental powers as a unified civilization, it would have control of the energies of its home planet as a natural consequence.

When a great number of people become unified with higher intention as in meditating on peace – potentials of violence also dissolve.

Apparently, DNA is also an organic superconductor that can work at normal body temperature, as opposed to artificial superconductors which require extremely low temperatures between 200 and 140°K to function. In addition, all superconductors are able to store light and thus information. This further explains how DNA can store information.

There is another phenomenon linked to DNA and wormholes. Normally, these super-small wormholes are highly unstable and are maintained only for the tiniest fractions of a second. Under certain conditions stable wormholes can organize themselves, which then form distinctive vacuum domains in which for example, gravity can transform into electricity. Vacuum domains are self-radiant balls of ionized gas that contain considerable amounts of energy. There are regions in Russia where such radiant balls appear very often.

Following the ensuing confusion the Russians started massive research programs leading finally to some of the discoveries mentioned above. Many people know vacuum domains as shiny balls in the sky. The attentive look at them in wonder and ask themselves, what they could be.

I thought once: "Hello up there. If you happen to be a UFO, fly in a triangle." And suddenly, the light balls moved in a triangle. Or they shot across the sky like ice hockey pucks: they accelerated from zero to crazy speeds while sliding silently across the sky. One is left gawking and I have, as many others, too, thought them to be UFOs. Friendly ones, apparently, as they flew in triangles just to please me.

Now, the Russians found – in the regions where vacuum domains often appear – that sometimes fly as balls of light from the ground upwards into the sky, and that these balls can be guided by thought.

Since then it has been found that vacuum domains emit waves of low frequency that are also produced in our brains and because of this similarity of waves they are able to react to our thoughts. To run excitedly into one that is on ground level might not be such a great idea, because those balls of light can contain immense energies and are capable of mutating our genes.

Many spiritual teachers also produce such visible balls or columns of light in deep meditation or during energy work, which trigger decidedly pleasant feelings and do not cause any harm. Apparently this is also dependent on some inner order, quality and origin of the vacuum domain. There are some spiritual teachers, like the young Englishman Ananda, for example, with whom nothing is seen at first, but when one tries to take a photograph while they sit and speak or meditate in hyper-communication, one gets only a picture of a white cloud on a chair.

In certain Earth healing projects, such light effects also appear on photographs. Simply put, this phenomena has to do with gravity and anti-gravity forces that are ever more stable forms of wormholes and displays of hyper-communication with energies from outside our time and space structure. Earlier generations that experienced

such hyper-communication and visible vacuum domains were convinced that an angel had appeared before them: and we cannot be too sure to what forms of consciousness we can get access when using hyper-communication.

Not having scientific proof for their actual existence, people having had such experiences do NOT all suffer from hallucinations. We have simply made another giant step towards understanding our reality. Official science also knows of gravity anomalies on Earth that contribute to the formation of vacuum domains. Recently gravity anomalies have been found in Rocca di Papa, south of Rome.

Scientific Explanation of Rain Dance that was Pioneered by Native Americans

Gary Vesperman's websites padrak.com/vesperman, commutefaster.com/vesperman.html, and <https://app.box.com/v/CLEANENERGYEXHIBIT> link to his Gallery of Clean Energy Inventions exhibit. The exhibit includes a profile of "Etheric Weather Engineering". Some native American tribes had pioneered rain dancing for triggering rain. A rain dance during a drought in central Nevada in 1931 triggered so much rain that there had been some flooding.

For rain dance skeptics the above German article offers a scientific explanation of how rain dancing can influence weather. The key statement is this:

"As a rule, weather for example is rather difficult to influence by a single individual. But it may be influenced by group consciousness (nothing new about this to some indigenous tribes). Weather is strongly influenced by Earth resonance frequencies (Schumann frequencies). But those same frequencies are also produced in our brains, and when many people synchronize their thinking or when individuals (spiritual masters, for instance) focus their thoughts in a laser-like fashion, then it is not at all surprising that they can influence the weather."

For possibly more on bioengineering as well as the science of rain dancing Gary Vesperman's website padrak.com/vesperman links to a mathematical Russian paper "Polarization Model of the Inhomogeneous Physical Vacuum".
