

# Was the Human Species Created Inside the Moon?

I wrote in 2014-2015 my 263-page compilation of “Space Travel Innovations” which is linked in [padrak.com/vesperman](http://padrak.com/vesperman) and [commutefaster.com/vesperman.html](http://commutefaster.com/vesperman.html).

I have come to realize that the book kind of buries a profoundly important subject – how did the human species originate on this beautiful but awfully lonely Planet Earth?

The purposes of my writing this essay are two-fold: To extract from the “Space Travel Innovations” book text pertinent to the origin of the human species and arrange them into a separate narrowly focused whole. My second purpose is to add somewhat reasonable evidence that Earth’s Moon is an artificial sphere. While the Moon has been observed to have some bizarre anomalies the hypothesis that the Moon is hollow does not hold up to closer examination.

Every one of Earth’s millions of exquisitely engineered species of plants and animals as well as humans HAD to be designed in a gigantic ultra-sophisticated laboratory hidden from us humans. The Moon’s interior would be one logical location for such a laboratory.

Offered is a reasonably credible answer to the question – who were the species engineers?!!!

BOOK REVIEW by Serge Kahili King

We haven't done a book review for years, but this one is so remarkable that we're making an exception. The book is *The Message From Water*, by Masaru Emoto, head of an international group doing research on subtle energies.

While considering that water comprises over 90% of the material of a fertilized ovum and that even as adults we are about 70% water, Emoto wondered about the effects of water on our health and well-being on a deeper level than just hydration.

One day he received the inspiration to examine the formation of crystals from water taken from various sources. He was mainly concerned with the state of water in Japan, but soon his research had international cooperation.

Emoto started out by setting up an unusual laboratory. It was essentially a refrigerator large enough to hold many samples of water as well as a desk, a microscope equipped with a camera, and a researcher. Since the laboratory had to be kept at a temperature below freezing, each researcher could only stay in it taking pictures for about a half hour at a time.

In his book, which is written in Japanese and English, he provides a large selection of photographs of water crystals from various sources and subjected to various conditions and treatments. The results are truly astounding.

Using crystals formed from distilled water as a base comparison, Emoto starts out by showing us photos of crystals from several rivers in Japan. The first shocking discovery was that very polluted water either has no crystal structure when it is frozen or else the crystals are very distorted and partial. In contrast, photos from clear mountain streams are well-formed. Surprisingly, crystals from mystical or sacred places like Lourdes in France and Tenkawa (a river near a Shinto shrine where I once did a Hawaiian shaman ritual) are beautiful, but their centers are empty.

Later, there are before and after photos of frozen water subjected to heavy metal, classical and sad music, positive and negative printed words taped to the sides of sample bottles; and even positive and negative thoughts. The results of that are about what you would expect if you know Huna.

However, the most exciting experiment in my opinion was one in which a sample of water was taken from a polluted dam in Japan and then frozen and photographed. Next, a Buddhist priest sat by the water and spent an hour in prayer. Immediately after the prayer session another sample was taken, frozen and photographed. You can see the results on the next page.

The book is published in Japan and the ISBN number is 4-939098-00-1.

**The DNA Phantom Effect - Secrets of Prayer and Healing**

## Moving Mountains: The DNA Phantom Effect

In the early 1990s, Moscow's Russian Academy of Sciences reported a startling relationship between DNA and the qualities of light, measured as photons. In a report "The DNA Phantom Effect" detailing these early studies, Dr. Vladimir Poponin described a series of experiments suggesting that human DNA directly affects the physical world through a new and previously unknown field connecting the two. Recognized as a leading expert in the field of quantum biology, Dr. Poponin was on loan to an American research institution when this series of experiments was carried out.

The experiments began as the patterns of light in a vacuum were measured in a controlled environment. After all of the air was removed from a specially designed chamber, the patterns and spacing of the light particles followed a random distribution, as expected. These patterns were double-checked and double-recorded, to be used as a reference for the next portion of the experiment.

The first surprise came as physical samples of DNA were placed inside the chamber. In the presence of genetic material, the spacing and patterns of the light particles shifted. Rather than the scattered pattern that the researchers had seen before, the particles of light began to fall into a new pattern resembling the crests and troughs of a smooth wave. The DNA was clearly influencing the photons, as if shaping them into the regularity of a wave pattern through an invisible force.

The next surprise came to the researchers as they removed the DNA from the chamber. Fully believing that the particles of light would return to their original state of random distribution, something very unexpected occurred. The patterns were very different those seen before the DNA was introduced. In his own words, Poponin described the light as behaving 'surprisingly and counter-intuitively.' After rechecking the instruments and rerunning the experiments, the researchers were faced with finding an explanation for what they had witnessed. In the absence of the DNA, what was affecting the particles of light? Did the DNA leave something behind, a residual force of some kind, that lingered long after the biological material had disappeared?

Poponin writes that he and the researchers were "forced to accept the working hypothesis that some new field structure is being excited. . . ." To emphasize that the effect was related to the physical DNA molecule, the new phenomenon was named the 'DNA phantom effect.' Poponin's 'new field structure' sounds surprisingly similar to the 'matrix' of Max Planck's force and the effects suggested in ancient traditions.

This series of experiments is important because it clearly demonstrates, perhaps for the first time under laboratory conditions, a relationship that offers even greater credibility to the effect of prayer in our physical world. In this instance the DNA was more or less a passive collection of molecules unattached to the brain of a conscious living being. Even in the absence of direct feeling pulsing through its double-helix antenna, there was a force and a measurable effect in its immediate world.

Researchers suggest that the average-sized person, of average height and weight, has many trillions of cells in his or her body. If each cell, each antenna of feeling and emotion within an individual, carries the same properties affecting the world around them, how much is the effect amplified? Now, rather than random feelings coursing through the cells of that one person, what happens if the feeling is a result of a specific form of thought and emotion, regulated as prayer? Multiply the effects of this one individual, empowered through a specific mode of prayer, by even a fraction of the 6 billion or so people in our world today, and we begin to get a sense of the power inherent in our collective will. It is the power to end all suffering and avert the pain that has been the hallmark of the twentieth century. The key is that we must work together to achieve such a goal. This may prove to be the greatest challenge of the third millennium.

In our own language we have the vocabulary to describe our forgotten relationship to the forces of our world, the intelligence of the cosmos, and one another. Using some of the most sensitive devices of our time to measure fields of energy that we did not even acknowledge fifty years ago, our own science has now validated the relationship of which the ancients reminded us over two thousand years ago. We have direct access to the forces of our world, and we have come full circle. This is the language to move mountains. It is the same language that allows us to choose life over cancerous tumors, and create peace in situations where we may believe that peace does not exist. When we read of healing miracles in times past, no longer are we left wishing that the same miracles could occur today. The miraculous outcomes are already here; we are simply asked to choose them.

Today I continue to pray. For me, each moment of life has become a prayer. I still give thanks for the good things and now feel empowered to choose new conditions in place of those that have caused suffering in the past. My training in the hard sciences has shown me that there are few mysteries and little we cannot validate, if we dare to accept the 'laws' that nature shows us in the miracle of each day.

Prayer has demonstrated to me that certain things *are*, regardless of our ability to prove them in the moment. For example, I know that some of the most sacred memories of our heritage have been scattered throughout the monasteries, churches, tombs, and temples of those who have come before us. I also know that the same memories live on in the customs and traditions of peoples that we may previously have judged as primitive. I know that we are capable of beautiful dreams, great possibilities, and unspoken depths of love. Perhaps most important, I know that a possibility already exists in which we have ended the suffering of all creatures by honoring the sacredness of all life. That possibility is already here and with us now. I know these things to be true, because I have seen them. The moment we allow for such possibilities on a mass scale becomes the first moment of new hope. It is that moment that we will always remember. It is the moment when we override the last day of prophecy.

(End of article)

BTW, I, Gary Vesperman, have a strange story:

I met an energy researcher just once back in the mid-1990's. We kept in contact all these years. He is especially knowledgeable about energy inventors and their energy inventions. Every few months he emails me an interesting report. He lives in Arizona.

My website [www.padrak.com/vesperman](http://www.padrak.com/vesperman) has a link to my paper "Torsion Field Physics and Torsion Field Communications" which I had written a few years ago. Last winter 2013 I wrote an update "Torsion Field Physics and Torsion Field Communications II". While I was writing the TF II paper one evening, I had gotten as far as the chapter titled "The DNA Phantom Effect". I then took a break by checking my Yahoo Inbox for new emails. There in the Inbox was a report that my friend had sent titled "Chemical Evolution Theorist Forced into a U-Turn". The timing was perfect for me to add his report as the very next appropriate chapter!

Here's another example of the power of the human mind to influence matter. The International Symposium on New Energy was held in the Denver Hilton South, Denver, CO April 25 - 28, 1996. From my report on the symposium is this:

Brian O'Leary, a former Apollo astronaut, in his speech described his experiments with psychokinesis, which is the study of the human mind's influence on matter. One successful experiment involves dropping balls such as ping pong or tennis balls down an array of pins sticking horizontally out the side of a vertical panel. The statistical distribution is triangular. A person focusing on the balls to move left or right will disturb the triangular distribution pattern so as to bulge left or right corresponding to the bias of the person's mind.

(End of excerpt)

The magnitude of the 9/11 World Trade Center attack was apparently foretold a couple of months before by statistical analysis of Internet language. Mob hysteria often powerfully and contagiously affects individual behavior.

## Chemical Evolution Theorist Forced into a U-Turn

ARCHAEOLOGY NEWSFLASH 340

This news is from Jonathan Gray – [www.beforeus.com](http://www.beforeus.com).

### Chemical evolution theorist forced into a U-turn

"We've made an awful mistake!" Dismay was in Dean's voice. "A student has knocked our theory to bits!" Dr. Dean Kenyon, Professor of Biology (Emeritus) at San Francisco State University, was one of the leading chemical evolution theorists in the world. He co-authored "Biochemical Predestination", which claimed

1. that the evolution of life was inevitable...
2. that proteins to produce living cells were formed directly by forces of attraction between their parts...
3. that proteins are just formed together (self-assemble) in chains, directly from amino acids, without any DNA assembly instructions.

His theory was accepted with enthusiasm by the evolutionary scientific community. But within just five years after publishing, Kenyon suddenly had serious doubts. It began when one of his students asked, "How could the first proteins have been assembled without the help of genetic instructions?" (Proteins were the necessary information to build the first cell.)

And then DNA was discovered. This would prove fatal to Kenyon's molecular evolution theory. Kenyon confesses, "The more I conducted my own studies, including a period of time at NASA-AMES Research Center, the more it became apparent there were multiple difficulties with the chemical evolution account. And further experimental work showed that amino acids do not have the ability to order themselves into any biologically meaningful sequences.

"The more I thought about the alternative that was being presented in the criticism, and the enormous problem that all of us who had worked on this field had neglected to address, the problem of the origin of genetic information itself, then I really had to re-assess my whole position regarding origins." (Unlocking the Mysteries of Life)

What he now had to address was this: What was the source of the biological information in DNA? "If one could get at the origin of the messages, the encoded messages within the living machinery, then you would really be onto something far more intellectually satisfying than this chemical evolution theory." (Ibid.)

The astonishing fact is that inside every microscopic-sized cell, machines work together to accomplish specific jobs and are shepherded by other specially shaped machines to precise locations where they are needed. Learning this, Kenyon exclaimed, "This is absolutely mind-boggling, to perceive at this scale of size, such a finely tuned apparatus, a device, that bears the marks of intelligent design and manufacture!"

## **Observable evidence of a master designer**

This is observable evidence of thoughtful, programmed designing by some Superior Mind. Evidence of intelligently organized patterns.

### **Music in genes**

Something else. Did you know this? It was recently discovered that DNA is linked to music! If you like music, but think that you can't carry a tune, you may be wrong. Respected geneticist, Susumo Ono, believes he's discovered music in genes – particularly human genes, fish genes and rabbit genes. Susumo is a researcher in DNA.

He asked himself, "If we were to assign a musical note to each chemical on the DNA strand and string those notes together and play them, what would DNA sound like?"

So he did this – and the result was amazing. He discovered musical patterns of notes, that again reveal intelligence. Susumo Ono was so astonished that he took his findings to musicians. And musicians, in turn, were astonished to hear echoes of Bach, of Schubert, of Mozart in DNA music. Using the same formula for converting DNA into music, Dr Ono worked backwards and translated Chopin's funeral march into chemical symbols. It came out cancer!

Skeptics naturally point out that these strands of DNA produce only a string of single notes; it is the musicians who fill in the rhythm and the harmony.

But the bottom line is this: Whichever way you look at it, the PATTERNS of single notes testify to intelligence as the source of DNA. Certainly it is not from a blind, accidental force in nature.

### **Identical to written language**

But there's more, much more. Scientists at Bell Laboratories conducted studies on the mathematical language in the DNA molecule. And what did they find? Its mathematical pattern is identical to that of conversational language.

Concerning DNA, Charles Thaxton states: "A structural identity has been discovered between the genetic message on DNA and the written messages of a human language." (Charles Thaxton, "A New Design Argument," *Cosmic Pursuit* 1, no. 2, Spring 1998)

Hupert Yockey explains: "There is an identity of structure between DNA (and protein) and written linguistic messages.

"Since we know by experience that intelligence produces written messages, and no other cause is known, the implication, according to the abductive method, is that intelligent cause produced DNA and protein.

"The significance of this result lies in the security of it, for it is much stronger than if the structures were merely similar.

"We are not dealing with anything like a superficial resemblance between DNA and a written text.

”We are not saying DNA is like a message. Rather, DNA is a message. True design thus returns to biology.”

(Hubert P. Yockey, “Journal of Theoretic Biology”)

Since there is no doubt in anyone’s mind it takes intelligence to write a language, it is evident that it took intelligence to write the DNA code.

### **Intelligently designed ‘sentences’ impressed from the outside**

Dean Kenyon was asked if DNA comes in intelligently designed ‘sentences’.

INTERVIEWER: “And is it true that when scientists peer into the microscopic world of DNA, they find not mere random arrangements, but well-written ‘instruction books’?”

KENYON: “Yes. Masterpieces of immense intricacy and subtlety.”

INTERVIEWER: “And you argue that these biological ‘sentences’ in DNA could not have arisen merely by material means, as evolutionists suggest?”

KENYON: “No. Just as the chemistry and physics of ink and paper do not determine the order of symbols in a printed text, but that order must be impressed on the ink from the ‘outside’, so also the order of the bases, or sub-units, in DNA [adenine, thymine, guanine, and cytosine, or A, T, G, and C as commonly represented] is not determined by the known chemical tendencies of these individual sub-units, but instead appears to have been impressed from the ‘outside’ on the sub-units to create just those sequences that make biological sense.

The fantastic complexity and orderliness of the DNA code – condensed into an incredibly tiny size – suggests the work of a brilliant intellect rather than chance processes. It suggests that much thought has gone into their design – just as human beings use intelligence to design and construct computers, jumbo jets, space craft and other intricate equipment.

If radio signals were to be received from outer space, they would be understood as evidence of an intelligent source. Why then should we not regard the message sequence on the DNA molecule as prima facie evidence of an intelligent source?

### **Designed not to evolve**

But that is not all! Gene code letters have built in error protection! Genes store information in long strings of DNA, in the form of chemical letters, called A, T, C and G. So that genes can be accurately copied, each gene consists of two parallel strands of DNA held together by links between the code letters of one strand and those of the other strand. The two strands are not identical. That is, A’s do not link to A’s, and so on. Instead, they are complimentary. A’s always link to T’s; C’s always link to G’s.

Donail MacDonaill of Trinity College, Dublin, studied that pattern of linkages between letters. And he found that they form a parity code similar to computer codes, to minimize mistakes during the electronic transfer of information. (Nature science update, [www.nature.com/nsu](http://www.nature.com/nsu) September 18, 2002)

Now is the moment of truth. No one would be so naïve as to believe modern electronic parity codes could have evolved by chance. They were carefully planned by software designers. The parity code found in DNA is further evidence the genetic code was deliberately created. It also reminds us that DNA is designed to maintain accurate copies and avoid changes in the information it carries.

This means it was designed to NOT evolve. But rather to reproduce its own kind forever. Come to think of it, wouldn't that make evolution scientifically impossible?

International explorer, archaeologist and author Jonathan Gray has traveled the world to gather data on ancient mysteries. He has penetrated some largely unexplored areas, including parts of the Amazon headwaters. The author has also led expeditions to the bottom of the sea and to remote mountain and desert regions of the world. He lectures internationally.

## The Origin of the Human Species

Gary Vesperman

One of my projects is tracking down the origin of the human species. I reject the theory of evolution because it has too many obvious flaws. All one has to do is look at a fellow human and notice a preponderance of intelligent design such as the hairless forehead and even exquisitely precise engineering characterized by eyes and ears. When I was a kid living in Wisconsin's north woods, I particularly noticed that the red mark on red-winged black birds couldn't possibly be the result of random evolution undirected by higher intelligence.

The cheetah is the only large animal found to be genetically identical based on DNA testing of 50 specimens. The cheetah may well be a relatively recently introduced new species. The speedy cheetah combines the features of cats and dogs – the only such animal on earth.

Genetic, linguistic, and geological evidence all independently indicate that a few humans were created as spectacularly engineered holographic manifestations of the underlying reality by superior intelligence and placed on Planet Earth 200,000 years ago.

The reference I have for the finding by geneticists that humans started 200,000 years ago was in <http://www.nexusmagazine.com/articles/darwinism.2.html>. The link is no longer active. A search of nexusmagazine.com for Darwinism turns up Lloyd Pye's two-part article titled "Darwinism: A Crumbling Theory".

The reference I have for the independent conclusion by linguists that humans *also* began 200,000 years ago is in the Hammond Atlas of the World, by Hammond Incorporated 1995, ISBN 0-8437-1175-2, the chapter on Languages and Religions, page 22. The pertinent statement is "Some linguists theorize that all people – and all languages – are descended from a tiny population that lived in Africa some 200,000 years ago."

The reference I have for the independent similar conclusion by geologists is in Doug MacGougall's book "Frozen Earth; The Once and Future Story of Ice Ages" published 2004 by University of California Press, ISBN 0-520-23922-9, the chapter on Ice Ages, Climate, and Evolution, page 193. The pertinent statement is "Several species of *Homo* that we know about appeared and disappeared over the past 2.5 million years before *Homo Sapiens* finally arrived on the scene, probably between 100,000 and 200,000 years ago."

Next time you shop in a supermarket produce department, take a few minutes to appreciate the creativity that went into the genetic engineering of each of the types of fruits and vegetables. When I did that some years ago, I was dazzled and overwhelmed by the variety and originality of their beautiful designs of texture, taste, color, etc. I profoundly admire the artistic and precise genetic engineering required to make delicious and nutritious figs, watermelons, oranges, apples, bananas, potatoes, celery, cauliflower, string beans, squash, corn, peas, dates, beans, artichokes, lettuce, tomatoes, okra, walnuts, peas, anise, parsnips, basil, garlic, onions, cucumbers, bell peppers, beets, carrots, turnips, pears, strawberries, blueberries, apricots, leeks, spinach, raspberries, jicama, blackberries, cantalopes, wheat, bullberries, etc. Structural engineers particularly admire the cleverly designed strength and rigidity of the otherwise flimsily thin-shelled walnut.

My supermarket produce department shopping experience since then has never been quite the same.

I need a very attractive woman as a volunteer. Notice how she is so exquisitely designed. She can sing beautifully melodic songs. Her hair is neatly divided from a completely hairless forehead. Her eyes and ears operate with the highest engineered precision. If I squeeze and pinch her, she seems to be a solid female human, doesn't she? No, she is not. She actually is a spectacularly engineered holographic manifestation of the underlying reality. She can heal other people by simply laying her hands on them (Reiki healing). That is, her "mind has no providence for limitations". She can see submarines in the ocean. She can read other people's minds and past life history. She can predict the future. Her mind and senses are intimately connected with me, every one of you, everything else in the Universe, and even possibly with a higher being whose existence is advocated by some of the organized religions.

Finally, the holographic mind theory, as so thoroughly explained further and documented in Dr. David Yurth's unpublished book "Seeing Past The Edge", offers two fundamental lessons for her as she goes about her daily life of the utmost importance: First, careful scientific research indicates that her mind and senses really will survive death as apparently proven by numerous anecdotal reports of near-death experiences. Second, her acts of kindness and unkindness to her fellow human beings, and perhaps even her pet animals and plants, may be remembered by them for all eternity.

Gary Vesperman spent a couple of weeks March 2003 editing David G. Yurth's manuscript for his groundbreaking book "Seeing Past The Edge". Its 474 endnotes indicate his many years of extensive research in physics, consciousness, cosmology, etc. The following four paragraphs were copied (and slightly edited) from his book's Chapter 9 "The Torsion Field: Information Link to Infinity" (copied in "Space Travel Innovations"):

"More than 4,000 papers have been published by more than 150 teams of scientists over the past one hundred twenty years, describing what is the torsion field, what functions it performs, how it works, and where it is to be found.

State-of-the-art devices which have been created to operate in this field are becoming more prolific and sophisticated every day. Today, anyone can buy a 5<sup>th</sup> field generator from any of four sources in the former Soviet states. Their devices have been constructed, operated, tested, documented and patented. They propagate information into and retrieve information out of the torsion field.

The theoretical structure and functional dynamics of the physical vacuum and the role of the torsion field are becoming clearer every day. References are provided in the appendixes to more than 250 different papers, journals and books which describe many of the interesting features of the physical vacuum and the torsion field, including the research conducted by teams of scientists all over the world.

A lengthy list of attributes (see subchapter in “Space Travel Innovations” titled “Torsion Field Attributes”) has been experimentally identified which demonstrates that the torsion field operates holographically, without regard to time and distance. Its operations are characterized by a variety of behaviors which have been described conceptually, experimentally and mathematically as functions of spin polarity, angular momentum and weighted waveform vector velocities. For example, unlike electromagnetism, where analogous charges repel and opposite charges attract, in torsion fields spins polarized in the same direction attract, and spins polarized in the opposite direction repulse.”

“Space Travel Innovations” also includes Chapter 8 of “Seeing Past The Edge” – “Phenomena Which Can Not be Accommodated”.

(A public presentation of this topic can be enhanced by placing on a table two TV cameras, two TV monitors, and a square or rectangular aquarium containing just one fish.)

My website [padrak.com/vesperman](http://padrak.com/vesperman) links to a Russian physics book titled “Polarization Model of the Inhomogenous Physical Vacuum”. Matter is represented in the model by equations from the electronic theory of matter and the theory of continuum mechanics. In the analysis of the model developed, the physical properties of vacuum domains are compared to anomalous phenomena, such as ball lighting, UFOs, tornadoes, poltergeists, etc. The satisfactory coincidence of the physical properties of vacuum domains and the manifestations of the phenomena in question make it possible to confirm the viability of the model. Some discussion of torsion field physics is included.

Gary Vesperman’s hypothesis is that the Moon’s interior houses an enormous laboratory for engineering Planet Earth’s millions of species of plants and animals. The evidence presented below suggests that the Moon might even be an artificial satellite. If the Moon does not support a genetic engineering laboratory, where else could such a laboratory possibly be located, other than Planet Mars and outside of our solar system? Seismological records have enabled geophysicists to map the internal structure of the moon as shown in the figure linked at <https://geology.com/nasa/moon-internal-structure/>.

Where is the entrance to the Moon’s interior? At this time, is there anyone home? How loud are the burglar alarms? (Is Gary Vesperman kidding?) Are there any high-resolution photographs of the Moon’s surface which indicate artificial construction such as rectangular grids?

Ferrying new species of plants and animals from the Moon to Planet Earth and dropping them off into suitable habitats would require spaceships to protect them from the harsh environment of space. One other possible purpose of visiting unidentified flying objects from outer space, if UFO sighting reports are true, could simply be to occasionally census millions of species and to forecast species population trends, interactions, and balances.

It fascinates Gary Vesperman to try to visualize those very first humans being created in a Moon lab and then stepping off a spaceship onto the ground in an African jungle or meadow. They had to know what was going on. Did they arrive naked with no tools and no education and were told to figure out for themselves what plants and animals are edible, how to avoid being eaten by lions, how to build a worldwide Internet, etc? Did they come with a spoken language already taught to them?

It can also easily be visualized creating animals up to a reasonable size in a Moon lab, transporting them to Earth in a spaceship, and dumping them off in suitable habitats. The blue whale is the very largest animal ever known. The largest recorded size measured 98 feet in length and weighed 130 tons. The cavernous mouth of a blue whale gulps up to 220 tons of krill-laden water at a time. Hardly a candidate for transporting a few blue whales from the Moon to Earth!

Likely what happened is that the blue whale's genes were first engineered in a Moon laboratory. A temporary pen was built in the ocean or onshore. Blue whales were built in the pen and then set loose in the ocean.

An Internet search for "moon is hollow" unsurprisingly results in a variety of opinions, particularly those of skeptics, of course. These are some of the specific arguments for an artificial moon:

From <https://www.gaia.com/article/the-hollow-moon-theory-is-the-moon-an-artificial-satellite> we have this discussion:

### The Hollow Moon Theory; Is the Moon an Artificial Satellite?

The moon is often described as having divine, feminine energy – the female counterpart to our Sun. It is a source of cosmic phenomena, providing us with beautiful eclipses, changing tides, and hopefully a future staging point for missions to Mars and beyond. But when we start to look at the moon under a closer lens, a number of aberrant characteristics suggest that it might be hollow — and that there may be a secret moon base.

### The Moon Rings Like a Bell

The Apollo missions and subsequent moon landings have been at the center of controversy and conspiracy for years. There has been interminable debate as to whether we actually landed on the moon, what was found there, or to what extent NASA has been hiding information from us. But amid the quarreling and speculation, the number of anomalous features on the moon has puzzled scientists and conspiracy theorists alike.

Toward the latter end of the Apollo missions, NASA astronauts placed seismic recording devices on the lunar surface to document artificial and natural moonquakes. Their equipment recorded activity ranging from meteorite strikes, to man-made explosions, and crash landings of Apollo rockets. Even the sun's heat created seismic activity when it caused the moon to thaw on a daily basis.

The astronauts were given a series of ALSEPs, or Apollo Lunar Surface Experiment Packages to set up seismographs and initiate detonations ranging from shotgun-like charges, to mortars with multiple grenades. Eventually NASA intentionally crash-landed the Apollo 12 module as well as the S-IVB rocket setting off an explosive force equivalent to nearly 12 tons of TNT.

What they found was that the moon rings like a bell, reverberating sometimes for hours at a time. Not knowing much about the moon's material composition, NASA and the Apollo astronauts were astounded by what they heard and the results that it entailed. Clearly the moon's density was significantly less than the Earth's.

The Moon is a little more than one-quarter the size of Earth, another bizarre characteristic compared to any other natural satellite in our cosmic region. Of all the moons in the solar system, ours is the 5th largest. No other planet that we're aware of has a moon that is as proportionately big as ours. All other planets with moons that size are massive gas giants. Neptune, the closest in size with a moon that big, is four times the size of Earth.

The moon is about 2,100 miles in diameter, compared to the Earth's nearly 8,000-mile diameter, yet the mass of the moon is only 1.2 percent of Earth's, while the volume of the moon is only 2 percent of Earth's.

After NASA conducted these tests, it concluded that the moon has a similar composition to our planet, although significantly less dense, with a 31-mile crust of mineral plagioclase, a mantle of olivine and pyroxene, and a very small core of Iron and Sulphur. But when the Apollo astronauts first landed on the moon, they had difficulty drilling into the surface of the craters, which are anomalies in themselves.

Craters are thought to be the result of meteorite and asteroid impacts, meaning there should be a certain proportion between their depth and width. Instead many wider craters have similar depths to significantly narrower craters, with some even appearing convex. And when astronauts attempted to drill into the craters, they were barely able to penetrate the surface, discovering processed metals like brass, mica, and pure titanium. The Moon is a Spaceship; A Secret Moon Base?

In 1970, two Soviet astronomers had been studying the satellite and theorized that it was likely a hollow moon put in place by a highly-advanced extraterrestrial race. Their theory was based on these observable anomalies, claiming the Moon was an artificial shell that had been inhabited internally for years.

While it might seem farfetched that we are being surveilled by an extraterrestrial race on the moon, or that a hollow Moon may have been intentionally placed in Earth's orbit as a secret moon base, there are a plethora of inexplicable facts about its relationship with Earth. To this day, there are several theories that attempt to explain how the Moon ended up orbiting our planet, though none have been absolutely accepted, leading many to believe that the moon is a spaceship.

Without the moon orbiting precisely where it is, it's possible that life on Earth wouldn't exist, or at least wouldn't have evolved to the point that it has. In fact, it is estimated that less than 10 percent of all terrestrial planets in the universe have an Earth to moon ratio like ours, which provides the stability that is necessary to maintain a climate that can harbor life.

The size of the moon is such that it affects our axial tilt, or the way that the Earth wobbles on its axis, changing by a single degree over the course of thousands of years. This relevation to one degree of movement is necessary for climatic stability; without the moon's balance, the Earth could tilt as much as 85 degrees every million years or so, causing drastic changes. This would adjust the orientation of the Earth to the Sun so significantly that the Sun would shift to be situated directly over the poles rather than the equator where it currently is. Life could not evolve during such radical shifts.

Is the Moon Artificial?

There are two ways that planets typically acquire moons, through accretion or capture. The process of capturing a moon is just like it sounds, a moon will drift into the orbit of a planet and become trapped in its gravitational field.

In the process of accretion, a moon is formed at the same time as the planet from the accretion disk of the solar system. But this theory has been widely dismissed due to the differences in core composition and the fact that the moon is almost a billion years older than the Earth. In fact, the mineral composition of rocks found on the surface of the moon varies drastically from those found on Earth.

The abundance of titanium is one example of such an anomaly, with certain lunar samples containing up to 10 percent of this precious mineral; the highest abundance of titanium-rich minerals on Earth has never exceeded 1 percent. There are other processed metals found on the moon like mica and brass, as well as the presence of radioactive elements like uranium-236 and neptunium, none of which are found naturally on Earth.

These moon rocks, brought back from the Apollo missions, presented another surprise; they were magnetized. Scientists were baffled, having previously assumed that the moon never had a magnetic field. The Earth's magnetism is thought to be the product of an internal dynamo, in which the rotating, convecting, and electrically conducting liquid iron in the core generates the field. However, the moon wasn't believed to have a core large enough to generate this type of dynamo mechanism.

<https://universavvy.com/is-moon-hollow> presents some arguments for and against the hollow moon hypothesis:

In one of the most striking of cosmic coincidences, the Moon is about 400 times smaller than the Sun, and is also about 400 times closer to the Earth. This fact makes both these heavenly bodies appear to be of the same size, and also results in the phenomenon of total solar eclipses taking place.

(Apparently orbital mechanics experts have not been able deduce a scenario whereby the Moon happened to be traveling near the Earth and was then captured and inserted into such a precise orbit.)

So is the Moon Hollow Inside?

Suniti Karunatilake of Cornell University explains that the normalized polar moment of inertia of the Moon is  $0.393 \pm 0.001$ . This value is very near to that of a solid object (0.4) which has a radially constant mass-density. For reference, the normalized polar moment of inertia of the Earth is 0.33.

He also says that an extensive amount of seismic measurement data has been collected from the Moon. The scientific analysis of it has provided a near-accurate estimate of the thickness of the Moon's crust, mantle, and core, and it conclusively proves that the Moon cannot be hollow.

Further, Karen Masters of the University of Portsmouth states that, through analysis of the behavior of objects under the influence of the Moon's gravitational field, the mass of the Moon has been determined. Considering its observable size, its density has been calculated, which strongly negates any possibility of the Earth's natural satellite being hollow.

(If the Moon ever had been hollow, it would then very likely collapse into itself. So it has to be solid anyway.)

Why are its Craters Shallow and Rocks Old?

The reason why the lunar craters are shallow is similar to what the Spaceship Moon theory suggests, albeit minus the involvement of an alien hand. As is known, the composition of the Moon comprises hard elements such as iron and titanium in abundance. Their concentration could be more pronounced below the surface. As such, though small meteors might be able to drill lunar craters proportional in depth to their sizes, larger ones collide with the stronger interior layers, which impedes their progress. The geological activity, particularly lava, can explain why some craters have a flat or bulging convex bottom.

Studies on the rocks brought back from the Moon have indeed shown that they are much older than the oldest ones found on the Earth. However, scientists attribute this to the fact that while the Earth is geologically active forming newer rocks, the Moon is practically dead. As such, the surface rocks found on the Earth are younger than the ones found on the dead lunar surface.

## Why Does its Composition Differ from the Earth's?

If the Moon was indeed a part of the Earth, it should have nearly the same composition too. However, the fact is that, it doesn't; specifically, it lacks the significant iron core that the Earth has. But that doesn't necessarily mean that it was created by aliens and put into its orbit. The Giant Impactor theory offers a much more possible explanation.

This theory states that, at the time of the formation of our solar system, a small planet, roughly the size of Mars, which formed elsewhere in the universe and had a very different composition to the Earth's, got into a collision course with young Earth. The great impact led to the ejection of a large amount of heated matter from the surface of both the objects. This matter began orbiting the Earth, and subsequently stuck together, forming our Moon.

(Have orbital mechanics experts been able to agree on how this glob of ejected material happened to end up as a highly spherical object in such a precisely positioned orbit around the Earth?)

## Why does the Moon ring while the Earth doesn't?

The simple answer to this is because Earth has water. Water weathers the stones, expanding the different structures of the minerals in it, thus weakening it. When energy in the form of seismic vibrations due to meteor impact, thermal activity, etc., propagates through these stones, they behave as compressible structures similar to sponges. Thus, they are able to dampen the vibrations, as a result of which even the biggest Earthquake doesn't last longer than a few minutes.

The Moon, on the other hand, is a dry, solid, rigid mass. Therefore, without any dampening agent, even relatively small meteor impacts or Moon-quakes set it vibrating like a tuning fork. These vibrations tend to last for a much longer time than any on Earth. However, it doesn't have to mean that the Moon is hollow.

## The Moon has giant lava tubes

In 2017, Purdue University researchers helped discover a lava tube on the Moon that could protect astronauts from hazardous conditions on the surface as reported in <https://phys.org/news/2019-07-humans-lava-tubes-moon.html>. The photo is of a giant hole on the Moon which apparently is an opening to a large lava tube. The photo is linked is at <https://www.livescience.com/60733-moon-lava-tube-could-shelter-astronauts.html>. If sophisticated analysis of minute gravity variations is correct the hole leads to a lava tube nearly as large as the city of Philadelphia. This lava tube and other giant lava tubes on the Moon could house gigantic laboratories for species engineering.

But what if no Species Engineering laboratories are ever Discovered inside the Moon?

It seems reasonable to assume that very large ultra-sophisticated laboratories are needed for engineering Earth's millions of species. But what if no species engineering laboratories are ever found inside the Moon?

Other than Planet Mars then species could be engineered elsewhere outside of our solar system.

Another possible location is a planet-sized laboratory orbiting our solar system way, way beyond Pluto.

One wild possibility is that our E.T. friends are engineering species in another dimension or parallel universe that can't be perceived or detected by us humans. When a new species is to be introduced into a suitable habitat on Earth they reach into our universe and pass the new species through some kind of an interdimensional curtain.

January 2, 2020 Gary Vesperman wrote in his Facebook "Are there any dudes out there who would have an interest in WHERE the human species was created?"

Mary-Sue Haliburton replied –

I don't know about 'dudes' necessarily, but am following several threads of interest about the evolution vs breeding of modern humans as possibly done by the mysterious 'Annunaki' also transliterated as 'Anannage' by C. O'Brien who studied Baalbek as well as whatever documentation and archaeological info could be gathered together from that and other sites.

A website preserving his legacy and several books exist thanks to a 'Golden Age Foundation' in the UK. These articles definitely link into the catastrophism data from Electric Universe including comet strikes causing devastation of the ancient culture centres. Clearly, however, these Annanage had high technology, and may have cross-bred the earlier humans with themselves.

An overview begins with "Christian O'Brien V Zecharia Sitchin" subtitled "Comparing Historical Records". Excerpt:

"Sitchin drew heavily upon Kramer's accounts of Sumerian sophistication. Only one man really sorted out cuneiform origins by starting from the beginning and ignoring academic protocols and religious prejudice. He took a common sense secular approach and this has provided us with a down to earth and accurate version of these incredible historical events with his books the Megalithic Odyssey, Genius of the Few, the Shining Ones and the Path of Light. His name was Christian O'Brien and after a career as a leading exploration geologist and retiring from being the head of the oil operating companies in Iran in 1971, he set out with his wife Barbara Joy, to recover past knowledge until his death in 2001.

"It is notable that both Sitchin and O'Brien amongst others had the vision to recognize the essential fact, that there was a brilliant advanced civilization in the past, led by the Anannage (O'Brien's correct translation). Both deserve our full attention and respect in the recovery of our incredible history, free from man-made religious constraints, and the constant abuse of adjectives such as serpent, meaning wise man or woman, and not snake or reptilian, together with Semitic and Aryan dealt with earlier."

(End of Mary-Sue's report)

Internet searches for Annunaki and Anannage find a variety of theories and archaeological reports which speculate on the origin of humans such as the Bible's Genesis chapters.

Gary Vesperman and Angela T. Smith, Ph.D., both live in Boulder City, Nevada. It is a remarkable coincidence that they occasionally see each other during lunches in the Boulder City Senior Center.

Gary has bought Angela's 304 pages book "Voices from the Cosmos". Angela and co-author C.B. Scott Jones, Ph.D., provide detailed transcripts of remote viewing/telepathic interviews with members of 18 extraterrestrial (ET) races, including the Large Grays, Nordics, Small Grays, Annunaki and others. Pages 266 – 282 provide transcripts of their dialogues with the non-Human race called the Anunnaki. On page 267 the Anunnaki specifically claim they created Humans.
